# COMPONENTS

## Items

- Antimatter:** 1 pce Item.
- Artifact:** 1 pce Item.
- Briefcase:** 1 pce Item.
- Bludgeon:** 16 pcs Item, used to Rob/Attack or Sabotage.
- Gun:** 6 pcs Item. used to Rob/Attack or Sabotage.
- Helmet:** 12 pcs, Item. Protects Humans from Bludgeons and Hazards.
- Firebomb:** 8 pcs, Item. Drop/Throw to set Sections on Fire.
- Nanogel:** 8 pcs, Item. Used to Revive Downed Characters.
- Telepathic Rat:** 1 pce This Character is an Item.

- Fletcher:** 1 pce, Item. Only in play if *Billionaire* is in the game.
- Rocket Wings:** 1 pce, Item. Only if *Daredevil* is in the game.

## Section status markers

- Asphyxiation:** 16 pcs, back of Fire Hazard.
- Fire:** 16 pcs, back of Asphyxiation. Hazard.
- Damaged Token:** 30 pcs, back of Grey Goo. Placed on Damaged Section.
- Grey Goo:** 30 pcs, back of Damage. Placed on Sections, Project X: Grey Goo.
- Contamination Token:** back of Lock. Contaminated and takes up an Item slot.

- Lock:** 20 pcs, back of Contamination. Prevents Steps through Corridors.
- Trap:** 3 pcs, Only if *Operative* is in game. Token that might be a trap.

## Character status markers

- Bot Scrip Dice:** 1 pce Modifies bot scripts.
- Down Marker:** 20 pcs Marks Downed Characters.
- Escaped Marker:** 20 pcs, back of Annihilated. Marks Escaped Characters.
- Annihilated marker:** back of Escaped. Placed to show who is Annihilated.

- Medical marker:** 1 pce Tracks *Medical's* Agenda progression.
- Kompromat Token:** 26 pcs Spend to do 1 Action with a Character.

## Data tokens

- Evidence:** 20 pcs, back of NDA. Data. Manufactured in Security Station.
- NDA:** 20 pcs, back of Evidence. Data. Only if *Legal* is in the game.
- X-Secret Data:** 20 pcs, back of Digital Assistant. Player may peek at Project X.
- Digital Assistant:** 20 pcs, back of X-Secret. This Character is Data.

## Character pawns

- Human Character:** 21 pcs Human Character pawns.
- Robot Character:** 6 pcs Robot Character pawns.
- Project X Character:** 1 pce Project X pawn.
- Cyborg Character:** 1 pce Human/Robot Character pawn.

## Board status marker

- Abandon Ship Marker:** 1 pce, Shows if Abandon Ship has been declared or not.
- Power Status Marker:** 1 pce Tracks Damaged Power Sections.
- Camera/Jammer Status:** 2 pcs Shows Cameras' or Jammers' statuses.
- Re-entry Token:** 3 pcs Randomize at setup, determines turn 0.

- Map/Ability Modifications:** 18 pcs Character-based Map customizations.

- Minute Marker:** 1 pce Marks the turns left to Stationfall.

## Player markers

- 1st Player Marker:** 1 pce, Placed in front of the starting player.
- Activation Disc:** 9 pcs (1 per player). Placed to Activate Character.
- Bribe Marker:** 12 pcs +1 action or +1 Point at Stationfall.
- Guilt Marker:** 9 pcs (1 per player). Used on the Guilt Track.
- Influence Cube:** 72 pcs (8 per player) Marks Influence over Characters.
- Minute Markers for 2 player:** 9 pcs Track Character order in 2 player games.
- Reveal:** 9 pcs (1 per player) Tokens that show who has Revealed.
- Time Markers:** 27 pcs (3 per player) Tracks future events.

**Minute Track:**  
Is where you track what Minute (turn) you are at using the Minute marker.

**Power Status Track:**  
Reflects the number of Damaged Power Sections and the effect these have.

**Betrayal Box:**  
Other players Influence cubes will go to the Betrayal Box after Revealing.

**Vent:**  
Paths between Sections that only Characters with the *Tunnel Rat* Ability can Step through.

**Dark section:**  
Downing a Human in a Dark Section does not affect the acting player on the Guilt track.

**Power Section:**  
Power Sections (bolt icon) affect the Power Status.

**Corridor:**  
Paths between Sections that cost 1 Step Action to pass.

**Section Name / Action Bubble:**  
The name, Actions and Effects unique to this Section.

**Gravity Section:**  
Blue Sections have gravity.

**Zero Gravity Section:**  
Pink and Green sections do not have Gravity.

**Cameras:**  
Cameras witness the Downing of Humans in Lit Sections.

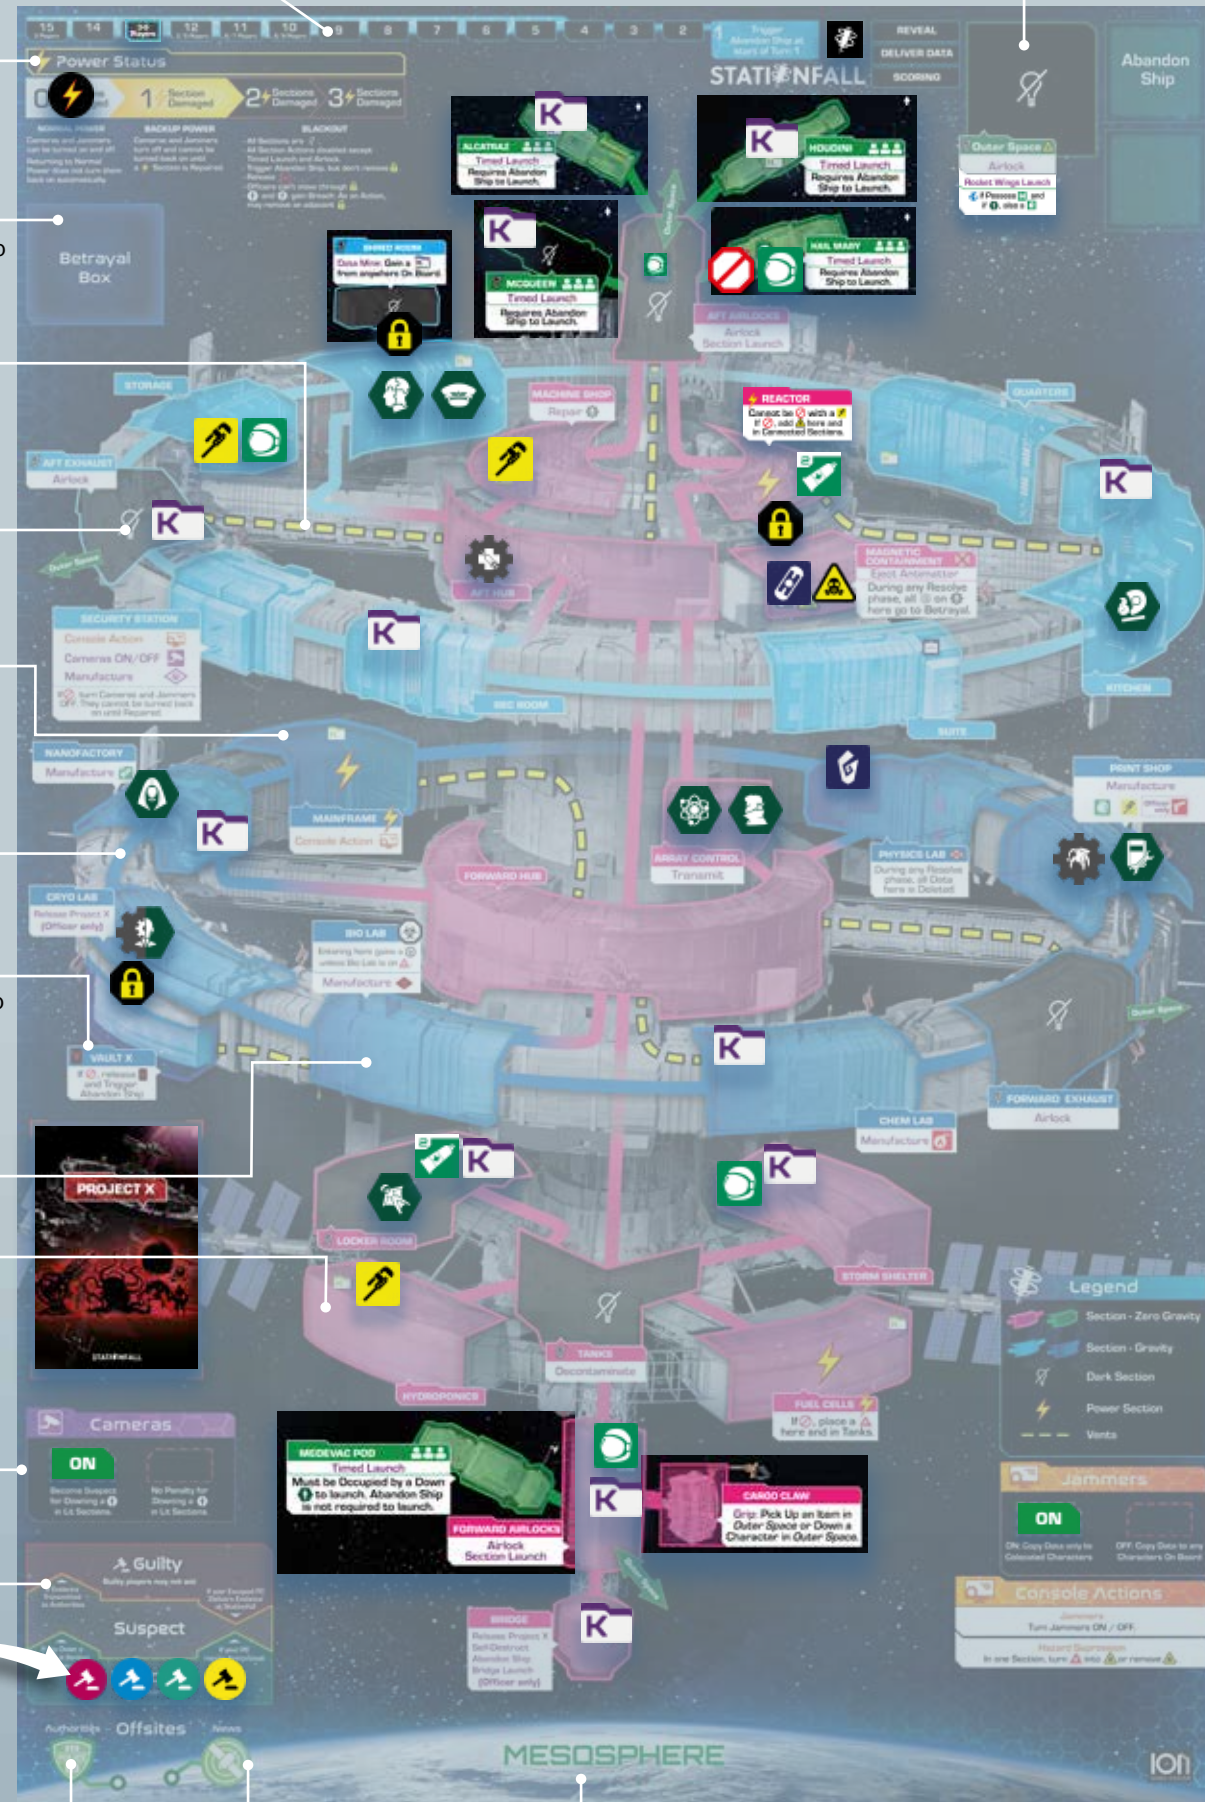

**Guilt Track:**  
Tracks Players' Guilt status. All players start Innocent.

**Authorities:**  
Place a copy of Data sent to the Authorities here.

**News:**  
Place a copy of Data sent to the News here.

**Mesosphere:**  
Escaped Characters and Pods are moved to here until Stationfall.

**Outer Space:**  
Outer Space counts as a Section outside of the station. Humans need a Helmet.

# WELCOME TO THE LAUNCH MANUAL

This is the rulebook to start with if you have never played Stationfall before and want to learn how to play it. It also contains the solo version rules: “Station Automation.”

## WHERE ARE YOU?

Something’s wrong. The Station crew are hustling here and there but no one is answering my questions. Does this have anything to do with that weird noise earlier? Or that weird comm I got last night? Is that robot looking at me funny? Hey, that guy is wearing a helmet; do I need a helmet!? A glance out the window confirms the whole Station is tumbling... that’s odd, but is it dangerous? If there was danger there’d be an alarm or something, right? And has the Earth always looked that... big?

## WHO ARE YOU?

Imagine a dozen or so random humans, robots, and none-of-the-aboves, each with their own Abilities, Agenda, and secret relationships, running wild on a space station because it is going to be incinerated in less than 15 minutes. You are one of them, and you have collaborators, forming a conspiracy together, ready to assist you in achieving your Agenda. And your conspirators may be allied with others on the station, without your knowledge, which may be problematic for you. There’s also definately probably some sort of monstrous secret weapon project locked up on board, which may be problematic for everyone.

Stationfall is a box full of creative solutions, but that box is going to morph, twist, and grow teeth over the course of play. Your best turns will exploit the unique tactical freedom of utilizing your conspiracy to achieve your Secret Identity’s Agenda, as well as deductions about your opponents’ identities and Agendas. Stationfall is messy, intricate, and full of dangerous variables.

Good luck!

# RULEBOOKS

Stationfall comes with three rulebooks:

## STATIONFALL LAUNCH MANUAL

This is the book you are reading and it is the best place to start your journey. In it you will find:

- **The Components and a map with all related terminology indicated**, located on the foldout part of the cover.
- **A Tutorial game** where you play following special game instructions. The rules are not altered or simplified but you are progressively introduced to the rules as you play and only a particular selection of characters are used. In addition you play with Lindsey, a scripted player provided by the rules. She is playing with her hand open so all can see and learn from her choices.
- **Station Automation**. A ruleset for playing with Bots, for either solo or cooperative play. Can also be used in any other game mode of Stationfall.

## STATIONFALL REFERENCE MANUAL

Useful to have available whenever you play Stationfall, including when you play the Tutorial game. It is written as a reference guide, in a deliberately condensed and formal way. It has an index and icon library on the back and is intended to work as a player aid.

## STATIONFALL CHARACTER DOSSIER

In it you will find special rules that Characters add to the game. Characters' Abilities and other rules found on the Character cards are in this book. You will also find rules that the components linked to a Character have. Each Character has a backstory also included in the Character Dossier. In addition the Project X cards are presented here.

# TUTORIAL GAME SETUP

Use the Board setup shown in the Component and Section presentation at the start of this Launch Manual. It shows the setup as it is intended in the tutorial game. Start by placing the station board between all players.

## PLAYER COMPONENTS

The Tutorial game is meant to be played by 3 players, using 12 specific Characters and 4 player colors, (3 colors for the 3 players and one for a scripted player called “Lindsey”). If there are more than 3 players, some can play 1 Character together. If you are 2, or even only 1 player, play with the surplus players’ cards open and decide together what the surplus players do during their turns.

Each player takes

- 8  **Influence cubes**
- 1  **Activation disc**
- 1  **Bribe token**
- 1  **Reveal marker**
- 1  **Guilt marker**
- 3  **Time markers**

in a color of their choice.  
Randomly assign a starting player and give that player the “1st player marker.”

## CHARACTER CARDS

Normally the Character cards are randomly drawn from all available Characters. This time we will play using a specific set of 12 Characters; place the following Character cards on the table next to the board: Astrochimp, Counselor, Cyborg, Daredevil, Engineer, Exile, Medical, Security, Station Chief, Stowaway, Stranger and Troubleshooter.

NOTE: These 12 Characters provide less complexity and in most cases a more balanced and less chaotic game than a game with randomly selected Characters. It may be used when introducing the game to new players, or at anytime when these qualities are desired.

### Player Setup example:

Identity cards

Character Cards

Find the **Identity cards**, **Character pawns** () and **Kompromats** () (Kompromat is short for “compromising material”) for the 12 Characters in play.

## SECRET IDENTITIES AND HOW TO WIN

*In this game Lindsey is playing with her cards open.  
Give her the Identity cards for Engineer and Station Chief.*

From the remaining 10 Identity cards, deal 2 random cards to each player, face down. You can look at them but keep them secret.

On the Identity cards, some of the information is identical to the Character cards. And some of the information is new. The Agenda is found on both. It is a list of statements with stars in front of them. The Agenda tells you how you get the main portion of your points in Stationfall. The scoring procedure is explained at the end of the tutorial game in the Chapter “Stationfall.”

*Lindsey chose the Engineer as her Secret Identity, and has the Station Chief as her Bonus Character (called BC). This means that she will get points from the Engineer’s Agenda + Bonus points if the Station Chief is Down at Stationfall (the end of the game is called Stationfall). She rotates the Station Chief card 180 degrees in her hand to mark her choice.*

Now it is your turn to choose your Secret Identity. The winner is the one who gets the most points during scoring. The main way to score points is from their Secret Identity’s Agenda. There are strategy tips on the Identity card on how you can achieve your Agenda. Consider them if you want. But if this is your first time playing Stationfall, choose a Secret Identity with your gut feeling.

- Of the two identity cards you received, you will choose one to

be your Secret Identity and the other will become your Bonus Character (BC) which score Friend or Grudge points for you.

- Keep your Secret Identity as it is and rotate the BC 180 degrees, keeping both secret from the other players.

### SECTIONS, ITEMS AND PAWNS ON THE STATION

Put components on the map following the list below:

- **Map modifications:** Place the 4 **Pods** *Alcatraz*, *Hail Mary*, *Houdini* and *McQueen*, arrow side up, on their places, connected to Aft Airlocks in the top of the map (see image below). In addition, place other map modifications according to the Character cards in the game. In our chosen mix of 12 characters, this means: *Counselor* adds **Shred Room** to **Therapy Garden**, *Daredevil* adds the **Rocket Wings Launch Action** to **Outer Space**, *Engineer* adds a **modification rule to Reactor**, *Station Chief* adds **Medevac Pod** to **Forward Airlocks** and *Troubleshooter* adds **Cargo Claw** to **Forward Airlocks**.

- **Kompromat:** Normally you would shuffle all Kompromats face down and place them on the **K** icons on the board, starting at the bottom of the map (only on the purple ones).

*For this Tutorial game, place Astrochimp's Kompromat on the green Kompromat spot in Therapy garden. Place the remaining 11 shuffled Kompromats face down on purple Kompromat icons, starting from the bottom. Leave one purple location in Pod Houdini without a Kompromat.*

### Markers:

Place the following on the board:

- Each player's **Guilt marker**  on "Innocent".
- The **3-9 player Minute marker**  on the Minute track's slot 13.

- Randomize the **3 Reentry tokens**  **face down**, and place 1 on the 0 Minute slot on the Minute track.
- The **"Abandon ship marker"**  on the **"Abandon Ship"** box in top right of the board.
- The **Cameras' and Jammer's markers with their "ON"**  **side up** in the Cameras and Jammer boxes.
- The **Power Status marker**  on **"Normal Power."**
- **Pawns:**  Place the Characters' pawns according to their starting location, written on their Character cards.
- **Character Items starting on the map:** Place **Daredevil's Rocket Wings**  in **Print Shop**.
- **Project X:** Place 1 random face down **Project X card**  on its place near **Vault X**.
- **Artifact**  in **Physics Lab**, **Antimatter**  in **Magnetic Containment**, and **Briefcase**  in **Suite**.
- **Helmets** , **Bludgeons** , **Nanogels**  in Sections where there are such preprinted setup icons.
- **Locks**  on the corridors, covering the open lock icon , leading to **Reactor**, **Vault X** and **Shred Room**.
- An **Asphyxiation**  token in **Magnetic Containment**.
- All remaining punch out tokens sorted and available where every player can reach them. This is referred to as the supply.

NOTE: You put the "Minute" marker on the 13 Minute slot in a 4 player game. In Stationfall each turn represents 1 minute of the hectic final moments of the Station. So in this game it simulates what you do when you realize that the station is going to disintegrate in...13 minutes.

You can find this complete game set up on the fold-out page at the beginning of this book. Note that for this tutorial set-up only, Houdini's Kompromat has moved to *Therapy Garden*.

# STATIONFALL TUTORIAL GAME

by Jon Manker

*"The sun is new each day."  
(Heraclitus 535-475 BCE)*

**This Tutorial game is a learning experience. It is meant to be played twice. The first time you play, the Tutorial guides you until turn 9. The second time you play, the tutorial runs until turn 7. Turns are called Minutes and when the Minutes have run out it is Stationfall. At Stationfall you score points. As mentioned, these are described in the chapter "Stationfall" at the end of the tutorial game.**

The Component list and the Map illustrations on the cover fold out in the beginning of this book are helpful when you play the Tutorial game. The Actions you take are relatively simple in Stationfall but the multitude of Items, Sections, Characters etc, may seem overwhelming. But you do not have to study all those beforehand, you can enjoy exploring them while playing instead. And after a while the mechanics start to blend into a fascinating movie, with a new story each time.

## THE TURNS IN STATIONFALL

Turns are called Minutes in Stationfall. Here's an overview of a Minute. (Terms presented below will be explained during the tutorial and can also be found in the Reference manual.)

Each Minute as a player you do the following, in this order:

1. **Reveal** your Secret Identity, if you want.
2. **Place Influence Cubes** , on a single Character card, if you want.
3. **Activate** a Character with your **Activation disc**  OR **Renegotiate**.
  - If you **Activate** you have the potential to do each of the following things with the Activated Character in any order:
    - 1 **Action**, Actions can be Basic, Section or Character specific.
    - 1 **Extra Action** (if the Character was not Exhausted).
    - 1 **Free Pick Up** or **Drop**, if you want.
  - Kompromat Action**, spend a Kompromat  to do 1 Action with the specific Character indicated on the Kompromat.
  - Bribe Action**, spend a Bribe  to do 1 Action with any Character.
  - If you **Renegotiate** you return your Activation disc and 1 of your Influence cubes from any of the Character cards to your supply.
4. Resolve **Time markers**  and Project X actions.

## TUTORIAL GAME LAYOUT

This Tutorial text is separated into chapters called "Minutes." Each chapter has three parts:

The first part describes the concepts explained in this chapter.

*The second part written in this style tells you what Lindsey does separated into Lindsey's strategy, and Lindsey's Actions. Lindsey will never accept Bribes or Kompromats. You will learn during the game what those are.*

- **The third part written in this style tells you what you are supposed to do during that Minute.**

***Because of Lindsey:** There are some things that you are not allowed to do, due to Lindsey. Such things is noted in red, like this.*

**Let's get started!**

# 13 MINUTES TO STATIONFALL

Turn: 1

*"Your character is your fate"  
(Heraclitus 535-475 BCE)*

One special feature of Stationfall is that, even though your Secret Identity is one specific Character, you take actions using several Characters. You place 1 or more of your **Influence cube(s)**  on a Character (at the feet of the portrait) to make them your **Conspirator**. Then you place your **Activation disc**  (above their portrait) on any one of your Conspirators to take your actions with that Character.

A Character is your Conspirator when you have at least one Influence cube on it and at least as many cubes as any other player. You do not need the most cubes, just be tied for most cubes. So if you have 1 cube on a Character and another player also has 1 cube on the same Character, that Character is a Conspirator to both of you. In addition the Character has to be Live to be able to be Activated. All Characters in this Tutorial game are Live at the start of the game. We'll come across other states, such as Down or Escaped, later on in this tutorial.

When you **Activate** a **Conspirator** you get:

**1 Action** with that Character if it is **Exhausted** (has at least 1 **Activation disc** on it at the start of your turn).

**2 Actions** with that Character if it is NOT **Exhausted** (has no **Activation disc** on it at the start of your turn).

NOTE: When determining Exhaustion, all Players' Activation discs count, including your own.

***Example:** You activate Troubleshooter turn 1 by placing the first disc on her Character card, and do 2 actions with her. The next turn she is Exhausted to all players since your disc is on her card, if you decide to activate her again, this time you can only do 1 action with her (unless you use a Bribe or her Kompromat).*

In addition to the 1 or 2 Actions, you always get 1 Free Pick Up/Drop Action when you Activate a Character.

In this first turn we will focus on the Actions "Step" and "Pick Up."

**Step** is an Action used to move a Character's **pawn** between the Sections in the station, following the **Corridors**.

You can **Pick Up** two kinds of things on the Station:

- **Items (square shaped)** may enable certain actions and/or may score points. A Picked Up Item is put on the Item slots which are the dark areas at the right end of the Character card. Each Item slot holds max one item, unless otherwise noted on the Character card.
- **Kompromats**  belong to the Player and not the Character that picked it up. They are held in your hand, kept secret until used.
- **Contamination tokens**  are a special case that takes up one Item slot. Whether you want it or not, any Character that enters *Bio Lab* receives a Contamination token, placed on one of its **Item Slots**. It has relevance for some Characters' Agendas but has no additional bad effect. (Well, no bad effects right now for the characters on the Station, but may of course have some really bad effects on people back on the ground if it gets there. But that's a whole other movie...)

## LINDSEY'S STRATEGY

*Note that Lindsey's Secret Identity, Engineer, has an Agenda that is affected by Contamination. Because Engineer is Lindsey's Secret Identity, she does not want any Contaminated Characters to Escape from the station. **Escape** is described at p. 11. Looking further at Engineer/Lindsey's Agenda, the straightforward way to score many points is to arm something called the **Antimatter** . Antimatter is an Item found in the section "Magnetic Containment." The Antimatter will detonate 4 Minutes after being removed from Magnetic Containment, so Lindsey would like that to happen, and probably fast, to mess up other players' plans. So, what to do?*

*The Antimatter is in a Section behind a locked corridor. Locked corridors can be passed by Characters that have the **Officer Ability** (which removes the lock). The Engineer has that Ability. But to make it harder for other players to guess Lindsey's Secret Identity she will try to use the Station Chief to access Magnetic Containment rather than Engineer. Station Chief also has the Officer Ability. Antimatter is in a room with a **Hazard** token .*

A **Human** needs a **Helmet**  on their Character card to survive a Hazard. So somehow Lindsey needs to get a Helmet for Station Chief.

NOTE: Outer Space represents space, immediately outside the station. In the game this is 1 Section and you move to and from it using the Airlock Action following the Outer Space arrows. These are sometimes bidirectional and sometimes only allowing one direction. Moving to and from Outer Space takes 1 Action, just as any other movement between Sections. This way, a space walk into Outer Space can be a shortcut. To move from Forward Airlocks to Aft Airlocks for example only requires 2 Actions via Outer Space. Also note that Outer Space is always Hazardous, so any Human Character has to have a Helmet to be able to go there.

### LINDSEY'S ACTIONS

Lindsey will play with her Kompromats open since her hand is open in this Tutorial. First she makes Station Chief a Conspirator.

- **Place 1 Influence cube on Station Chief's Character card.**

Since it is Lindsey's first turn, Station Chief is her only Conspirator.

- **Place her Activation disc on Station Chief.**

She then decides to activate the Station Chief. Station Chief was not Exhausted so Lindsey gets 1 extra Action = 2 Actions (as well as a Free Pick Up/Drop). Station Chief starts in Therapy Garden. Lindsey chooses to use the once-per-activation Free Pick Up there immediately to get a Kompromat, in case it might be useful later.

- **Pick Up the Kompromat. The Kompromat is Astrochimp's.**

The Astrochimp Kompromat is given to the player, in this case Lindsey.

### LINDSEY'S STRATEGY

Lindsey's original plan was to move Station Chief to Storage to Pick Up the Helmet there, but since she got the Astrochimp Kompromat, it is probably a better idea to have Astrochimp help out with that during a later Minute.

### LINDSEY'S ACTIONS

Lindsey chooses to take the Action "Step" twice.

- **Step Station Chief from Therapy Garden to Aft Hub and then to Reactor.**

### THE PLAYERS' ACTIONS - TURN 1

Decide who goes after Lindsey and continue clockwise around the table. During this first turn:

**Because of Lindsey:** Do not place Influence cubes on Station Chief, Stowaway or Astrochimp to make Lindsey's Actions work in future turns. Avoid Picking Up the Helmet in the Aft Airlocks to make Lindsey's Actions work in future turns.

- **Create your first Conspirator, by placing 1 Influence cube on any Character card. If one of the cards' two abilities is in a purple box, there may be special rules on how to place Influence or Activation discs there. It is written on the card in these cases.**
- **Place your activation disc on your Conspirator.**
- **Take 1-2 actions.** (1 action if the Character was Exhausted, otherwise 2) Choose between Step and Pick Up in any combination.
- **If you can, Pick Up a Kompromat.** Try to have your activated Conspirator be in a Section with a Kompromat at some point during your turn, and pick this up, as your Character's Free Pick Up Action.

# 12 MINUTES TO STATIONFALL

Turn: 2

*“The unlike is joined together, and from differences results the most beautiful harmony.”  
(Heraclitus 535-475 BCE)*

A new turn means first of all that the Minute marker moves 1 step to the right, in this case to Minute 12. So, 12 minutes left until Stationfall, in game-story time. The first player marker does not move.

- **Move the Minute Marker from 13 to 12**

Some Actions require or are modified by Items. As you saw during setup, some Items are available from the start on Characters or in different Sections. Other Items can be manufactured in certain Sections, where it says **“Manufacture.”** Items are represented by square tokens, they are physical objects that are handled with the Actions Pick Up, Drop, Give, Throw and Rob. These names are fairly self explanatory. (As always, check the Reference manual for exact details). Some of the Actions in the game require an Item to perform, such as Sabotage, which means that you damage a Section and disable any Section Actions this Section may allow. Section Actions are described further in the next Minute.

Actions might also be affected by Character Abilities. An Ability is written in colored spaces in the middle of the Character cards. They are often important if you want to create powerful combos with your Actions. Their colors indicate which kind of Ability it is; red for offensive Abilities, purple for Abilities that deal with Activation, Influence Cubes, etc. For more details on these colors, see the Character Dossier.

## LINDSEY'S STRATEGY

*Lindsey wants to Activate a new Character in order to get 2 Actions. If she were to Activate the Station Chief again, she would not get the extra Action, since the Station Chief is Exhausted, which is shown by the fact that there already is an Activation disc on her at the start of Lindsey's turn. Because of the Kompromat she received last turn, Lindsey thinks making Astrochimp a Conspirator is a good plan to be able to do things with him in preparation for using her Kompromat.*

*Her plan is to set Astrochimp up to be able to dramatically Throw the helmet in a later Minute to help Station Chief get it. So, focusing on this she chooses to NOT use the Free Pick Up to get the Kompromat in the Kitchen, but save it for after taking two Step actions and Free Pick Up a Helmet instead.*

## LINDSEY'S ACTIONS

- **Place an Influence cube on Astrochimp** and move her **Activation disc from Station Chief to Astrochimp.**

*Step twice, making use of Astrochimp's Ability “Tunnel Rat.” It lets Astrochimp Step through **Vents**, which are the dashed yellow lines on the map. This Ability does not cost anything, it just lets Astrochimp have more paths to move along.*

- **Step through the Vent that leads from the Kitchen to Reactor.** Then, as the second Step, **move through the corridor to Aft Airlocks and Free Pick Up the Helmet.** Place the Helmet token on Astrochimp's Character card on one of the Item slots.

## PLAYERS' ACTIONS - TURN 2

Same player order as before, this is valid for the rest of the game (and will not be mentioned again).

**Because of Lindsey:** As before, avoid placing cubes on Station Chief, Stowaway or Astrochimp and do not Reveal as Stowaway or Astrochimp (to make Lindsey's Action work in future turns).

- Add a new Conspirator to your conspiracy. **Place an Influence cube on a Character** that is not a Conspirator of yours yet.
- Activate your new Conspirator. **Move your Activation disc to that Character card.** Remember that you get 1 extra Action if the Character is not Exhausted.
- Try to Pick Up an Item. Moving and picking up a Kompromat is a good thing to do, but also try to find Items to Pick Up this turn that you think can be useful for you.
- Try to utilize the Character's Ability. If you can, try to make use of an Ability that your new Conspirator has, or at least check its Abilities and read up on them so you know what they mean.

# 11 MINUTES TO STATIONFALL

Turn: 3

*"Abundance of knowledge does not teach you to be wise."  
(Heraclitus 535-475 BCE)*

Start the turn by moving the Minute marker. It should now be on 11.

Apart from Basic Actions, such as Step and Pick Up, there are also **Section Actions**. All of them are written along with the Section's name in the text bubble next to the Section (details can be found in the Reference manual). Section Actions cost 1 Action to perform, just as the Basic Actions. Section Actions are only available to perform by a Character with its pawn in the Section where the Action can be done. A Section can be **Damaged**. Damage means that anything written in its white part of the Section's text bubble is disabled, including Section Actions there are no longer possible to take. This is marked by placing a Damage token on the Section's text bubble. Other characteristics of Sections, such as Dark, are not affected by Damage.

A Section can be Damaged in several ways, the most obvious one is the Basic Action **Sabotage**, which requires the Conspirator who takes the Action to have the item **Bludgeon** or a **Gun** . Sections can have other attributes mentioned via text or icons, such as **Dark** or, as in **Bio Lab**, where Characters get Contaminated by entering.

## LINDSEY'S STRATEGY

*Lindsey's Secret Identity, Engineer, also wants to prevent any Contaminated Characters from getting back to Earth (this would give Lindsey 4 points). The Section that contaminates Characters is Bio Lab. A very important factor to consider, a common challenge in Stationfall is other Players' being able to Influence your Conspirators and derail your plans. We are making it easy for Lindsey, since you are told not to do anything using Station Chief, Astrochimp or Stowaway, but normally this could cause problems.*

*The Stowaway is a flexible Character that can appear on the map in any Dark Section the first time she is activated. This is an example of a Character that has special rules when it comes to Activation. Stowaway's pawn, , starts on her Character card.*

*Her 1st Action in the game HAS to be to move her pawn from her Character card to any **Dark Section** on the board. Lindsey has her mind set on dealing with Bio Lab using a Firebomb , so she decides that Stowaway's 1st Action will be to Step her Pawn from her Character Card to Forward Exhaust.*

## LINDSEY'S ACTIONS

*Make Stowaway a Conspirator and Activate her. Stowaway is not Exhausted so Lindsey gets to take 2 Actions (and a Free Pick up or Drop).*

*Move Stowaway from her Character card to Forward Exhaust and then Step Action to move Stowaway to Chem Lab. There Lindsey uses her Free Pick Up to take the Kompromat in Chem Lab, (if no one else has taken it already, that is).*

## PLAYERS' ACTIONS - TURN 3

**Because of Lindsey:** Still, avoid placing any Influence cubes on or Revealing as Station Chief, Astrochimp or Stowaway.

- **Add more Conspirators (if you want).** More Conspirators is useful if you want to have more Characters to select from when you Activate.
- **Have a Conspirator work towards your Agenda.** This time, try to be a bit Creative in what you choose to do, preferably starting to work towards your Secret Identity's Agenda. **Look at the Tip-section on your Secret Identity card** for inspiration. Remember to check in the Reference manual and Character Dossier if there are terms you do not understand.

# 10 MINUTES TO STATIONFALL

Turn: 4

*“Ever-newer waters flow on those who step into the same rivers”  
(Heraclitus 535-475 BCE)*

Now that you are more familiar with how to Influence and act with Characters, we will go a bit deeper into some details in the game. This Minute we will see an example of how to use Bribes and Kompromats to take more than 2 actions in a turn and cover how to Escape from the station in Pods.

To arm the Antimatter you have to move it out of the *Magnetic containment*. As mentioned previously, other players' Actions may (and probably will) interfere with your Actions. If you want something specific to take place, making it happen in one turn before the others predict it is a good idea. Kompromats and Bribes can give you such possibilities. Kompromats add 1 Action for a specific Character and Bribes 1 Action for any Character.

## LINDSEY'S STRATEGY

*Lindsey will not be able to get the Antimatter out in 2 Actions (step into Magnetic Containment, Pick Up Antimatter and Step back to Reactor). It requires 3 Actions in this case. And Station Chief does not have a Helmet and has to spend her Free Pick Up on getting that instead of potentially using it for a Free Pick Up of the Antimatter. But she has Astrochimp's Kompromat and the Bribe token left so she will use these.*

### **Lindsey's turn in cinematic interpretation:**

*Astrochimp, floating in zero Gravity in Aft Airlocks, heaves his Helmet in a hail mary pass through the corridor to the Reactor. Station Chief floats towards the incoming Helmet, receiving it (using her Free Pick Up). She floats onwards to Magnetic containment and when reaching the locked door she unlocks the door mid air with her Officer credentials. Station Chief floats into Magnetic containment (taking her first Action “Step”, being protected by the helmet in this Hazardous Section). In Magnetic Containment, Station Chief takes the Antimatter (using “Pick Up” as her second action, moving the Antimatter token to Station Chief's Item slots). Then Station Chief makes an extra effort, and manages to direct herself out of Magnetic Containment, back to Reactor, (Lindsey spends her precious Bribe token, placing it on Station Chief, symbolizing a Bribe paid earlier, to have Station Chief do an Action, which Lindsey chooses to be “Step”). The Antimatter container has exited the Magnetic containment, it starts blinking red and a warning signal from it tells us it is now armed and unstable and will inevitably detonate in 4 minutes.*

## LINDSEY'S ACTIONS

*Don't add any Influence cubes.*

- **Activate Station Chief** (move the Activation disc to Station Chief).
- **Use Astrochimp's Kompromat** (place it on left side of Astrochimp's card) to take the **Throw action to move the Helmet from Astrochimp to Reactor**.

- **Free Pick Up Helmet with Station Chief, Step into Magnetic Containment** (removing the Lock to the supply because of her Officer ability) and **Pick Up Antimatter**.

- **Use Bribe on Station Chief to Step to Reactor and arm Antimatter, flip it and place one of Lindsey's Time markers on the Minute track, 4 turns into the future (Minute 6).**

Speaking of future turns, did you remember to advance the Minute marker this time? It should now be on slot 10 on the Minute track. (Gold star to you all if you remembered to do so!)

Lindsey did 5 things in 1 turn (including the Free Pick Up). Planning such grand moves can help prevent others from interfering with your plans, but are costly. You only have 1 Bribe and if it is unused it is worth 1 point to you during Scoring, so use it with care and only when it really makes a difference. Furthermore the Bribe is placed on the left side of the Character card of the Character it is used on (*Station Chief* in this case). If this Character is another player's Secret Identity, that player will get 1 point for that Bribe during scoring.

## ANTIMATTER

Arming the **Antimatter** means a few things:

- **The Antimatter token is flipped to its armed**  **side.**
- **Abandon Ship is triggered**, mark this at the top right of the board by **flipping the Abandon ship marker**. This also **removes all locks from the board. Remove them now.**
- **Place one of the acting player's time markers (as you just did for Lindsey).** When the Minute marker reaches the time marker, at the end of that player's turn, the Antimatter will detonate.

**Abandon Ship!**  
Remove all .  
Pods with this requirement may now be launched.

If the **Antimatter is still on the Station when it detonates, the game ends triggering Stationfall** (the game end sequence, described later).

If the Antimatter is elsewhere when it detonates, other things may happen, check the Reference manual in these cases.

So, right now there are only 4 turns left. **If you need more turns for your agenda, you should try to get the Antimatter off the station** when it detonates, in which case the game continues after the Antimatter detonates.

**Time markers** are placed on the Minute track or on Sections. They indicates that something will occur at **the end of a player's turn**; during a specific Minute if it is placed on the Minute track, or at the the end of the next Minute if it is placed on a Section. Several different effects involve Time markers, Pod launch is one of them, described below.

## ESCAPE AND PODS

Many Character's Agendas involve Escaping the station. It is also important for BC Friend points . To **Escape** means that a Character has been moved to the Mesosphere. Characters in the Mesosphere are marked with the **Escaped marker** , which is placed on the Character card. They cannot be Influenced or Activated any more. The most common way to do so is to use a **Pod**. The Pod finds its way to the Mesosphere by itself but setting it up for launch may be a challenge.

Each Pod has requirements written in their information text. These needs to be met before the Launch action may be performed. For most of them this includes Abandon Ship having been triggered. Because the Antimatter got armed, this has now been taken care of.

**Maximum number of occupants**

A Pod needs at least 1 occupant (Human and Robot) and can have no more than its maximum number of occupants. The maximum is indicated by silhouettes . Some Characters are not Humans or Robots (they may instead be Data or an Item). These do not count as occupants. In this tutorial however all included Characters are Humans or Robots.

A Pod is launched by using a **Section Action**. There are three Section Actions that do this:

- **Timed Launch**, performed by a Character inside a Pod. The player doing this places one of their Time markers on the Pod. The Pod launches at the end of their next turn.
- **Section Launch**, performed by a Character in the Section a specific Occupied Pod is attached to. This Character is left behind, but the Pod launches immediately, no time marker needed.
- **Bridge Launch**, performed by a Character at Bridge. This is similar to Section Launch but simultaneously launches all Occupied Pods that have met their Launch requirements.

NOTE: Abandon Ship is automatically triggered at Minute 1, but it is not certain that there is a Minute 0. Two times out of three, there is no Minute 0, this is determined by the Reentry token (the token you placed on the 0 spot on the Minute track during setup). To be certain to be able to launch a Pod from inside it, using the Timed Launch Section Action, you should make sure to trigger Abandon Ship somehow *before* Minute 1. Causing Blackout from Damaging two Power Sections or taking the Actions Abandon Ship or Self-Destruct from *Bridge* are examples of ways of doing so. These have other effects too, see Reference Manual for complete information.

## PLAYERS' ACTIONS - TURN 4

**Because of Lindsey:** Do not put Influence cubes on Stowaway. All other Characters are now free for you to use.

- **Review your situation.** Many things changed because of the arming of the Antimatter and so should your plans. Have a look at your Agenda and the Tip, and see what could be your best course of Action. Stationfall is an ever changing beast, where the other players' Actions constantly change the conditions for your plans. This is a good example and a good opportunity to practice that.
- **Spend a Kompromat.** If you have one or more Kompromats, spend 1 of them, like Lindsey did. Just to test using Kompromats. Remember that a Kompromat Action does not come with a Free Pick up/Drop.

# 9 MINUTES TO STATIONFALL

Turn: 5

*“This world, which is the same for all, has not been made by any god or man, but it always has been, is, and will be an ever-living fire.”  
(Heraclitus 535-475 BCE)*

Start the turn by moving the Minute marker to 9. Here the Tutorial game splits into two paths. If this is the first time you are playing this tutorial keep reading. If it is the second time please skip ahead to the next paragraph, **“The 2nd time you play the tutorial.”**

## THE 1ST TIME YOU PLAY THE TUTORIAL:

Continue playing on your own, finish the game and try to get as many points as possible, using what you know so far. When Stationfall occurs, either by the Antimatter detonating On Board or by the Minute marker reaching “Stationfall” look at the “Stationfall” chapter at the end of this tutorial for scoring.

*Lindsey’s scripted Actions are over for this game. From Minute 9 and onwards, decide together what Lindsey will do on her turn, being creative on her turns, using variants of the things you’ve learned so far and discussing her options. Remember her primary goals: to prevent contaminated characters from Escaping, and making sure the Antimatter detonates on board.*

## THE 2ND TIME YOU PLAY THE TUTORIAL:

Now that you have played through Minute 13-10 twice, continue three more scripted Minutes, 9-7 to get introduced to the rest of Stationfall’s concepts. *You continue on your own when the scripted parts are over, from Minute 6 onwards.*

## REVEAL

You may Reveal at the start of any of your turns. Revealing means that:

- You place your Secret Identity card face up for all to see for the remainder of the game. Your Secret Identity is now instead your PC (Player Character).
- Your Live PC is always a Conspirator to you.
- Other Players may no longer Influence your PC (your PC will never become a Conspirator for any other Player).
- You place your **Reveal token** on the PC Character card, with its Character icon in the Reveal token opening.
- You remove all **Influence Cubes** from the PC Character card. Your own Influence cubes are returned to your pool, while other players’ cubes are put in the Betrayal box next to the Minute track. Cubes in the Betrayal box are lost for the player!
- **Activation discs** remain on the Revealed Character, since it is still

relevant if this Character acted recently and is Exhausted.

- Your **Reveal power** is now active (written at the bottom of your Identity card as well as next to the Reveal icon on the Character cards). There are three kinds of Reveal powers. One that happens **instantly** ⚡ and only once, one that is **persistent** ⌛ and one that provides a new **Action** this Character can take Ⓐ
- Your Bonus Character remains secret.
- Your PC can still be Bribed but after knowing what the Action is, you may refuse the Bribe token and not do the Action. If the Action is refused the Bribe is then returned to the bribing player. There is no penalty for declining a Bribe (but Bribes on your PC will often earn you points during Scoring).
- Your PC can also be targetted by the appropriate Kompromat. It works in the same way as Bribes, it is your choice to decline the Action or not. If you are Innocent and decline to perform the Action requested by the Player using Kompromat on your PC, you must move your Guilt Marker to Suspect. If you are already Suspect or Guilty, there is no penalty for declining the Kompromat. Regardless of whether you perform the Action or decline it, the Kompromat is discarded. (More on the concept of Suspect soon).

Instead of Revealing, you can, **Schrödinger Reveal**. This means that you instead Reveal as your Bonus Character. The procedure is the same, with the difference that your original Secret Identity card is discarded (not showing it) and you do no longer have a Bonus Character that may provide points during scoring.

## FIRE

As with Sabotage, **Fire** 🔥 is another way to change a Section’s attributes.

- When a Section catches Fire, place a **Fire token** 🔥 in the Section and a **Damage token** 🚫 on its text bubble.
- Characters that are Human need to have a Helmet 🛡️ in order to enter Sections that are on Fire. Any Unhelmeted Humans that are in a Section that catches Fire are immediately Downed.

If you want to remove a Fire token you have to do a **Console Action** called **Hazard Suppression**. Console Actions are done in *Security*

Station or Mainframe. (Some Character Abilities let them do Console Actions elsewhere as well). This replaces the Fire token 🔥 with a Asphyxiation Hazard token ☠️ (same as the one found in *Magnetic Containment* earlier). Another Hazard Suppression Console Action is needed to remove the Asphyxiation token.

## SUSPECT

Suspect was mentioned above. It means that your Guilt marker, the one you placed on “Innocent” during setup, is moved to Suspect. This in turn means that you risk becoming Guilty. Guilty is a concept in the game related to Data, which will be covered in Minute 7.

## LINDSEY'S STRATEGY

*After a dramatic Minute 10, Lindsey shows no sign of stopping. Lindsey will Reveal, to show how Reveal is done (and to wreak even more havoc on you all). Engineer's Reveal power triggers. It reads “Overload - Upon Reveal place a Time marker in any Section. When it resolves Damage that Section.” Lindsey chooses to place this Time marker in Vault X. If Vault X is Damaged, Project X is released. This means that at the end of her next turn Project X will be flipped and you will follow the instructions on that card.*

*Lindsey chose not to place any Influence cubes. She can Activate Engineer if she wants, since a Live PC is always a Conspirator, but she Activates Stowaway to acquire a Firebomb. Using the **Firebomb** she will be able start a Fire to prevent Contamination and make life problematic in general on the station. It is optional if the Firebomb explodes or not when you Throw it. Of course Lindsey wants the Firebomb to blow up and ignite the whole Bio Lab!*

## LINDSEY'S ACTIONS

- *Reveal as Engineer.*
- *Put her Reveal token on the Engineer Character card, move any other player's cubes on it to the Betrayal box*
- *Place one of Lindsey's Time markers on Vault X because of Engineer's Reveal power.*
- *Activate Stowaway and take the Section action Manufacture Firebomb 🔥. Place a Firebomb on Stowaway's Character card.*

- *Then take the Throw Action to throw the Firebomb into Bio Lab.*

- *Put the Firebomb back in the supply, put a Fire token on Bio Lab and a Damage Token on Bio Lab's text bubble.*

## PLAYERS' ACTIONS - TURN 5

Now all the rest of the players take their Minute 9 actions.

**Because of Lindsey:** All Characters and Items are now free for all to Influence, Pick Up and Activate. No more Lindsey based restrictions.

**Since this is the second time you are playing** there will be no recommended Actions for the players from here on, other than to go for the win! Simple and straightforward. Try to act so that you end up with as many points as possible.

## INFLUENCE STRUGGLES

Remember that you can Activate any Character where you are tied for the cube lead. We have not touched upon this yet (to keep things simple) but during the Influence phase you may put any number of Influence cubes, the limit is that you may only add your Influence to a single Character each turn.

Players having several Influence cubes on one Character is an important mechanic of the game. It is a way to make it harder for others to try to derail your plan for a Conspirator you intend to Activate. And it is a way to derail others' plans, preventing them from using a Conspirator they seem very interested in. Note that you can put Influence cubes on one Character card and then Activate any of your Conspirators, not necessarily the one you put cubes on that turn.

You have something called an **Influence Limit** on the top right corner of your Secret Identity card. You can place all of your 8 Influence cubes during the game if you want, but during scoring, any Influence cubes exceeding your Influence Limit will give you -1 point. Many Influence cubes on a Character is a bit of a risk due to Reveal, since cubes may be lost to the Betrayal box this way.

# 8 MINUTES TO STATIONFALL

Turn: 6

*"Because it is so unbelievable, the truth often escapes being known."  
(Heraclitus 535-475 BCE)*

## DIFFERENT STATES

Many Agendas, as well as the BC Friend and BC Grudge points, award points for Characters as being Downed or Escaped. Characters can have different states. Live is one, basically meaning neither of the other three states. Live is in most cases the starting state of a Character. Escaped is another state, covered earlier in connection with Pods. The remaining two states are Down and Annihilated. As mentioned during the previous Minute, Fire Downs Characters. But the most common action used to Down a Character is Attack.

Apart from Downing a Character just because it is in your Agenda, or to get BC Grudge points, there is normally a competition over different Items on the station. In particular when things start to heat up. In this Tutorial game, the **Rocket Wings** may be a very desirable Item to fight over, since it is an alternative way of Escaping. The Basic Actions **Rob** and **Attack** can both be used to take Items from other Characters. Both Rob and Attack require the Character to have a Gun or Bludgeon to perform. Helmets protect Humans against an Attack or Robbing by Bludgeons, there is no protection from an Attack by a Gun.

The Attack Action Downs a Colocated Character. This gives the Character the state Down and places a **Down marker**  on the Character card. You also turn the Character's pawn upside-down to show the Downed version  of the Character icon.

The Rob Action forceably takes 1 item from a Colocated Character.

The Pickup Action can be used to take an Item from a Colocated Down Character.

You can effectively Throw to *Outer Space* using the Section action Airlock (instead of Throw).

Characters can be Downed in many other ways too. All Characters have **Self-Preservation**, meaning they can not take Actions that with certainty would immediately Down themselves.

Characters that are Down may not take Actions or be Activated. To make the Character Live again you can take the Basic Action **Revive** with a Character that is in the same Section and has a Nanogel Item. **Nanogel**  has two sides, numbered 1 and 2. This means they can be used two times each. Flip them to the "1" side after the first use. Below is an example of Astrochimp being Revived using Nanogel.

Characters can also be **Annihilated**, for example if it is in a Pod that is Damaged when it Launches or if they are in *Outer Space* and the Antimatter detonates in *Outer Space*. Annihilated characters cannot be revived. Place the Annihilated marker  on their Character card. They can never take Actions or be Activated again in this game. But you can still Reveal, score points and win, even if your Secret Identity is Annihilated.

One important factor when it comes to Downing other Humans is that, unless the Section where it occurs is Dark or if the **Cameras** are OFF, you become a Suspect. Cameras can be modified by the Section Action Cameras ON / OFF taken in *Security Station*.

## LINDSEY'S STRATEGY

*Lindsey, (being Engineer) wants to make sure that no Contaminated Characters leave the station and that the Antimatter is still on board when it detonates. She will use Troubleshooter (provided that Troubleshooter still is Live and has a Bludgeon or Gun) to move towards any Contaminated Characters and try to Down them. Plan B is to Activate Station Chief and try to run away from any one that seems to be on their way to try to take the Antimatter from Station Chief.*

## LINDSEY'S ACTIONS

*This Minute and the coming Minutes, Lindsey will follow the script below. Check the numbered alternatives in order, one by one. As soon as the action on a alternative can be taken, she takes it and ends her turn.*

1. *IF there are any Contaminated Characters: **Influence** (if needed) **and Activate Troubleshooter** if she is Live and Armed.*
  - ***Step towards the closest Contaminated Live Character she can Down, and if the Actions are enough, Down them. Pick up any Bludgeon or Gun using Free Pick Up on the way.***
2. ***Place 1 Influence cube more than needed to Influence Station Chief, Activate Station Chief and Step twice away from all other Characters (or once if Station Chief is Exhausted).***
3. ***Renegotiate**, taking 1 cube from Station Chief and her Activation disc back to her supply.*

At the end of Lindsey's turn, Damage Vault X (due to her Reveal Power) reveal the Project X card, and follow the instructions on it. From now on, follow the instructions on the Project X card at the end of EVERY player's turn (meaning several times per Minute) starting now when it is revealed at the end of Lindsey's turn.

## PLAYERS' ACTIONS - TURN 6

One final note on what you can do during your turn that was briefly mentioned in Lindsey's scripted actions above is **Renegotiate**. Instead of Activating, you can **Renegotiate** meaning you take your Activation disc back and, if you want, 1 Cube from any Character that is not Escaped or Annihilated. This is usually not done until the game has progressed a bit.

# 7 MINUTES TO STATIONFALL

Turn: 7

*“Nothing endures but change”  
(Heraclitus 535-475 BCE)*

## DATA

Data is a concept in the game, separate from Items, and important to some Characters' Agendas.

**Data** can be Manufactured using some Section Actions or Character Abilities. The different types of Data are:

- **Evidence**  which means you can affect someone who is a Suspect, and make them become Guilty. But it can also be used to free yourself from Guilt, placing you back as a Suspect, if you are Guilty at Stationfall. Evidence can be Manufactured in *Security Station*
- **X-Secret**  which represents that this Character knows what Project X is. If you Activate a Character that has an X-Secret token, you may peak at the Project X card. X-Secret can be Manufactured in *Bio Lab*
- **Digital Assistant**  *Digital Assistant* is one of the Characters in the game. This Data token represents *Digital Assistant* and gives the Character in Possession of it have additional abilities as described on the *Digital Assistant* character card. *Digital Assistant* can be Manufactured in *Mainframe* and wants to spread out among the Characters to gain points from its Agenda. Only in the game if the Character *Digital Assistant* is in the game.
- **NDA**  which represents that a Character has signed an NDA which is important for *Legal's* Agenda. NDA is Manufactured by *Legal* or his Conspirators. Only in the game if the Character *Legal* is in the game.

Data is not an Item. It cannot be Picked Up or Dropped. Instead you can Manufacture it as a Section Action. It can also be Copied, Deleted, Transmitted (a Section Action in Array Control) or Robbed. Data is involved in different Agendas, including Transmitting the Data to different locations on Earth, called **Offsites** (Found on the bottom of the Board). Transmit adds a Copy of the Data token to that location on the Board.

Keep Data tokens on the upper part of the Character cards to show which Character Possesses which Data.

There are many combinations involving Data that you will discover as you play. The most generally applicable one is that if someone Manufactures the Data “Evidence” and sends it to the Offsite “Authorities”, then all Guilt markers on Suspect are moved to Guilty. As a Guilty player you can only win the game if your Escaped PC Delivers Evidence to Authorities  at Stationfall.

**Jammers** can be ON or OFF. If they are OFF you can Copy Data to any Character on the station. If Jammers are ON, Copy can only reach Colocated Characters. Transmit is unaffected by Jammers.

In the top left of the board you see the track called **Power status**. There are 3 Sections with a Lightning icon ⚡ on it. Match the Power status marker with how many of these Sections that are Damaged. Read next to the track to see what it means. Note that the two last steps have the same effect. If these Sections are Repaired, move the marker back again and functionality on the Station is restored.

## LINDSEY'S STRATEGY

- Since Lindsey is Engineer and since Engineer's Agenda includes that he can win even if he is Guilty, she does not need to worry about becoming Guilty if Troubleshooter Downs Characters in plain sight.

## LINDSEY'S ACTIONS

- Repeat the same script she had in Minute 8.

Remember to continue doing the Project X actions after each player's turn.

## PLAYERS' ACTIONS - TURN 7

Continue playing the game on your own until Stationfall, try to win and have Lindsey follow her script's 3 rows. Remember to continue moving the Minute marker.

# STATIONFALL

*“You will not discover the limits of the soul by traveling, even if you wander over every conceivable path, so deep is its story.”  
(Heraclitus 535-475 BCE)*

When you reach Minute 0, flip the Reentry marker there. If it is a big ball of fire 🔥, Stationfall occurs immediately. If not, the game continues for 1 more turn, then Stationfall occurs.

At Stationfall three things happen:

1. **You Reveal.** All players that have not done so yet Reveal their Secret Identity. All players also reveal their BC.
2. **You deliver Data.** All players who have an Escaped PC that has Data may deliver each Data to any of News and Authorities. Place a copy of the Data on that location.
3. **You score points.** Primary points come from each PC's Agenda (listed on both the Identity and Character card). Star icons represent points. A row that starts with a “+” will only score if the closest row above it that has no “+” is fulfilled.

*Example: Look at the Astrochimp's Character card. It tells you that the Astrochimp wants to Escape. And that you get extra points if you have Briefcase, Artifact and a Gun, but only if you also Escape.*

Apart from Primary points you also score your Bonus Character's Friend or Grudge points, points for Bribes, and get point penalties if you have used more Influence cubes than your Influence limit. Follow the Reference Manual paragraph 16 “Stationfall” to do the scoring for each player.

## CLOSING REMARKS

The Tutorial game can play out in quite a lot of different ways since there are many different combinations of Identities that the three players in the game may have. Also different Project X cards will change the course of the Tutorial game. This is intentional to give the Tutorial game more replayability value.

One thing to note in this game is that Lindsey was *Engineer*, but apart from Revealing, she has done no actions with *Engineer* and instead used other Conspirators to fulfil the *Engineer's* Agenda. This is very common in Stationfall. It is good to get used to thinking in those paths when playing this game.

Apart from the things mentioned in the Tutorial game, there are a few other details and edge cases for the normal gameplay, and there are many special rules for Sections and Characters. All of those are covered in the Reference Manual or in the Character Dossier. Hopefully you are now able to read these at ease, in their condensed format and discover them as you play more.

## YOUR NEXT COUPLE OF GAMES OF STATIONFALL

**In your 2nd game,** Try to make an informed choice of your Secret Identity based on the Agenda and to have a strategy towards completing this Agenda when you play.

**In your 3rd game,** also try to start deducing what other players' Agendas are and prevent them from completing them. Also try to be smart when you Reveal and consider how you can hide your intentions when you do your Actions before you have revealed.

**and in your 4th game and all future games,** keep looking for those intricate, crazy and exciting combinations of Actions that makes Stationfall the unique experience it is. That will tell a new fascinating sci-fi story each time.

**Have fun!**

# STATIONFALL PRIMER

by Petr Pospíšil

## **What to do at the beginning?**

- Read the tips on your Identity Card.
- Read all Characters Abilities carefully and find who can be helpful to you.
- If you are not familiar with the game do not read Agendas and Reveal Powers of other Characters.
- Make a plan but expect that plan to fall apart; improvise!
- Pick up Kompromat early while you still can.
- Your first Actions should not make it obvious to other players who your secret identity is.

## **When to Reveal?**

- If others seem to have guessed your identity, It's better to Reveal
- Pros of revealing:
  - You can use your Reveal Power
  - You get back your Influence and betray others' Influence
  - Except for Bribes/Kompromat, others can't use your Character.
- Cons of revealing:
  - You paint a big target on your back
  - You can't Bribe yourself
  - Other players won't inadvertently further your goals.

## **What to do in the mid game?**

- If your Influence limit is low choose your Conspirators wisely.
- Better to do things now rather than later, you might not get another chance.
- Helmets protect Humans from most dangers.
- You can Down Humans without penalty in Dark Sections or with Cameras OFF.
- If you need to Down a Human with a Helmet, find a Gun, or make one in a Print Shop with a Character that has the Officer ability, or get your target to remove their Helmet (by Activating, Bribing, or using Kompromat on them).

## **What to do in the end game?**

- To Escape, consider triggering Abandon Ship early either from Bridge with a Character that has the Officer ability, releasing Project X, or Damaging two Power Sections.

- You may not need to trigger Abandon Ship if Rocket Wings, Inspector's Shuttle, Medevac Pod, or Boarder is in the game.
- You can launch a Pod from inside it, from a connected Section, or from Bridge.
- If you are over your Influence limit, Renegotiate to get Influence back or visit Therapy Garden with your PC.

## **Oh no, I am dead! (Downed).**

- Humans and Robots can be Revived with Nanogel (Manufactured in Nanofactory).
- Robots can be Repaired in *Machine Shop* or by Characters with Jury Rig.
- Not all Characters need to Escape and their goals can be completed by others.
- You can still score bonus points from your BC.
- Try to prevent other players from scoring points or just cause general mayhem.
- If you have not yet Revealed, you can consider performing a Schrödinger Reveal.

# STATIONFALL STATION AUTOMATION

## Bots for Solo, Coop and Added Players

by Benjamin Schmauss, Jon Manker & Robin Spathon Ek.

This is a set of automated opponents, called '**Bots**', that can take the place of human players at the table. Note the difference between a **human player** (a real human playing Stationfall) and a **Human Character** (one of the Character types in the game). The Bots allow a single player to experience Stationfall similar to a multiplayer game. In addition, Bots can be added to any multiplayer game to raise the player count (up to 9) as they will make the Station feel more alive and chaotic, as well as break up the use of repetitive strategies within groups. It is also possible to play cooperatively or using the team game rules against the bots.

### COMPONENTS

The Bots are found on the back of the Character cards. When you use a Character as a Bot, have that side up. In addition a 6-sided dice is included to handle some aspects of bot behaviour. Every Bot also has a script card listing what Manoeuvre the Bot will try to do each Minute.

### HOW TO WIN

The human player or Bot with the highest score is the winner. Scoring is identical for human players, while the details for how Bots score is described in the Chapter "Stationfall" at the end of these rules.

#### Cooperative Mode

When playing cooperatively, the human players win if each *human* player has a higher score than each of the Bots.

#### Team Game

In a team game, during Scoring, put the two highest scoring Bots in a team and calculate their combined score. A player team has to have a higher score than that Bot team as well as being the highest scoring human player team, to win the game. The Bot team wins ties.

#### 6+ Players

The scoring rules for 6+ players are only used if the number of *human* players are 6+. Bots are not included in this count.

### SETUP

- **Decide how many Bots you want to use.** The more, the more difficult to win. Assign each Bot and each human player a color, and a set of player components.
- **Randomly decide the starting player**, which could be either a player or a Bot.
  - There should be a minimum of 3 players (human or Bot) in a game of Station Automation.

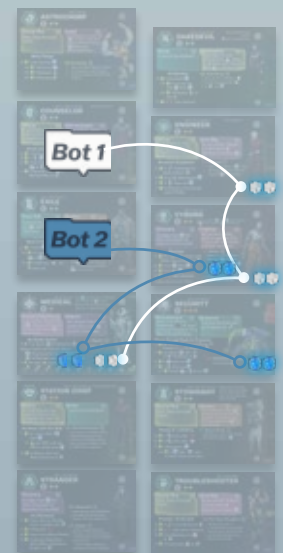

Choose or randomly select Character cards based on player count (all players + the selected number of bots, maximum of 9 in total) shuffle them and place them in 2 columns next to the board as normal setup.

- **Find the Identity cards for the Character cards that are placed on the board and shuffle them facedown.**
  - **Deal 1 to each Bot and 2 to each player. Each player chooses their Secret Identity and BC.** Bots do not have BCs.
  - When all have chosen, **reveal the Identity cards of the Bots and flip their Character cards to the Bot side and find their Bot Script cards (these are used when the Bots takes Action instead of the Identity cards which can be put back into the box).**

Custom Setup Variant: Choose which Bots you want in the game by choosing script cards or by dealing random script cards to Bots.

- **Place the Bot's reveal token on the Bot's Character card.** Bots start the game with their PC revealed, unless written otherwise on the Bot's Character card.
- Place each **Bot's Script card next to their components.**
- In turn order each Bot **places 2 of the Bot's Influence cubes on each of the next 3 NPC Character cards in Character Order** (this term is explained on page 24). If a Character has the Helpful ability, then the Bot only place 1 Cube there. Remember: each Character that isn't a revealed PC is a NPC. Skip Paranoid Characters, Drones, Down Characters and in some cases other Characters depending on rules on certain Bot cards.
- Set up the game components as in the

standard rules, including the components for the participating Characters, taking note of any special setup instructions on the Bots. Use the 3-9 players Minute marker.

## DIFFERENCES BETWEEN BOTS AND HUMAN PLAYERS

NOTE: The rules for individual Bots as noted on their Bot card may overrule the following.

- Bots do not have a Bribe.
- Bots do not use Bribes or Kompromat (but they Pick Up Kompromat).
- Bots do not accept Bribes or Kompromat.
- Bots do not have a Bonus Character (BC).
- Bots start their game Revealed.
- Bots use the Bot Side of the Character Card that may have different persistent abilities and Agendas than the original side.
- Bots' Renegotiate works differently.
- Bots have an Influence Limit of 8.
- Any Character activated by a Bot gains the Breach ability during their Activation (may remove an adjacent Lock).
- Bots do not drag Downed Characters with them.
- Bots will not Pick Up another Item of the same type they already Possess.
- Bots only do the Manoeuvres listed in their Script and will not take other more beneficial actions.

## A BOT'S TURN

All Stationfall rules apply when playing with Bots, unless stated otherwise. At the end of this solo rules chapter is a glossary of terms used in Station Automation. Refer to this when you encounter terms or icons you do not recognize.

### **Reveal?**

A Bot starts Revealed so it always skips the Reveal step.

### **Bot Influence?**

If a Bot has Influence on less than 2 Live NPCs, it places Influence cubes enough to have as many cubes as any other player, on the next Live NPC after the last Character in Character Order that the Bot has Influenced.

Bots may also place Influence cubes as part of their Activation if a Manoeuvre is to be performed and the chosen Character does not have enough cubes to be a Conspirator (see below).

### **Bot Activate?**

Follow the instructions on the script card and perform the first possible Manoeuver in that script. (See the chapter "Running

the Bots" below for more information about the Manoeuvres and Eligibility). Remember to place the Bots Activation disc on the Character it ends up Activating.

- If a Manoeuvre has an **Eligible** (see below) Character to Activate in the beginning of the line, this Manoeuvre is what the Bot will do this Minute, and then end its turn. If there is no Eligible Character, continue to the next Manoeuvre. Remember a Character Activated by a Bot has the Breach ability.
- Place Influence on the Activated Character until it becomes a Conspirator. Helpful, Loyal, and other Abilities still apply.
- If there are multiple Characters that can perform the Manoeuvre, the Bot will select the Character closest to the target, meaning the least number of non-Free Actions away (Characters' Abilities apply). If tied, use the tied Character that will take the most Free Actions. If there is still a tie, use Bot's General Priorities (see below). Remember that if a Bots Character uses the Breach Ability, this costs 1 Action.
- Bots have 2 actions or 1 if Exhausted, as well as Free Actions, just like players. They always use Free Pick Up during their movement if they can, following Pick Up priority if more than 1 Item can be Picked Up during their turn (see General Priorities below). Free Pick Up and other Free actions are described in more detail in the Special Cases chapter below.
- Bots do not attempt to maximize the use of their Actions and a Bot might complete their Manoeuvre using only a single Action and then skip the remaining Actions.
- If no Manoeuvre can be taken, the Bot instead skips to Bot Renegotiate.
- If there are multiple options with the equal number of Actions needed they use a set of general priorities as tie-breaker (see General Priorities below).

### **Bot Renegotiate?**

Bots only Renegotiate if they could not do any Manoeuvre this Minute. Retrieve the Activation disc, all Influence cubes from Betrayal, all Cubes from Downed or Annihilated Characters, and all cubes from the last NPC in Character Order.

### **Resolve!**

Bots follow the same rules as players when it comes to time markers. In case a Bot has to make a choice due to a Project X action, they decide following all targeting and priority rules. Bots never target their PC with negative effects from Project X cards.

## READING THE BOT'S SCRIPTS

The listed Manoeuvres use a specific terminology to explain the Actions they generate, different from other terms in Stationfall's rules.

- **Brackets “ [ ] ”** Each Manoeuvre in a Script begins by listing conditions that describe which character the Bot is considering for activation, written in brackets. If there are multiple conditions they are separated by a “+” and all such listed conditions are considered.

The Manoeuvre will list a specific target Action that the Bot wants to take. More complex Manoeuvres will also make use of the following terminology:

- **GOTO <SCRIPT>** means that the Bot will shift to another Script mentioned by name.
- **REPEAT.** Repeat the Manoeuvre using all remaining actions. Being able to take the desired Action multiple times is not a factor when selecting which Character to activate.
- **THEN.** After the part of the Manoeuvre before THEN is completed, perform the part of the Manoeuvre after THEN (if possible). Only the part of the Manoeuvre before THEN is considered when selecting which Character to activate.

In addition, parenthesis “ ( ) ” is used for remarks and comments that are not part of the actual Script. And some Bots have Start of Turn / End of Turn Bots Scripts that may trigger at the start or end of their turn following the instructions.

## BOT'S GENERAL PRIORITIES

Bots use the concept of priority throughout their scripts, character cards, abilities, and rulebook. In all cases the multiple options are listed in order of priority. For example “A > B > C” would mean that A has the highest priority and C has the lowest priority.

Whenever there are multiple options to choose from, the Bot will use General Priority as a final tie-breaker. At no point are human players required to make a decision for the Bot. Keep in mind that the closest eligible target is always prioritized, both when selecting a Character to activate as well as a section to take the action in.

The Bot's General Priorities are as follows (as seen from the Bot's perspective):

**Activating a Character:** Conspirator that can complete the Manoeuvre this Minute > Unexhausted Conspirator > PC > Conspirator with the most of any cubes on > Next in Character Order.

**Targeting a Character:** Has the least of the Activated Bot's Influence cubes > Has the most of non-Bot player's Influence cubes > Last in Character Order from the Bot's PC position.

**Choosing a Section:** Zero Gravity Section > Pod with most Occupants > Top-most Section > Leftmost Section.

**Picking Up Items:** Items Targeted in script > Kompromat > Purple Items > Red Items > Yellow Items > Green Items > Name A-Z.

**Dropping Items:** Green Items > Yellow Items > Red Items > Purple Items > Items Targeted in script > Name Z-A.

***Example:** The Manoeuvre instructs to “Pick Up > Manufacture: Gun > Bludgeon”. This means the Bot will consider to Pick Up a Gun, Pick Up a Bludgeon, Manufacture a Gun, and Manufacture a Bludgeon. By default the Bot will pick the closest option. If there are multiple options within the same distance, the Bot will choose Pick Up over Manufacture, and Gun over Bludgeon. In this example the Bot activates Microbiologist in the Physics Lab and someone dropped a Bludgeon in the Forward Hub. The closest options are: Pick Up the Bludgeon in the Forward Hub or Manufacturing a Bludgeon in the Print Shop. Manufacturing a Gun in the Print Shop isn't an eligible option as the Microbiologist isn't an Officer. Given that the first two options are at the same distance (1 step), Pick Up takes priority and the Microbiologist moves into Forward Hub and picks up the Bludgeon. However, if there would be a second Bludgeon dropped in the Print Shop, then the decision would go to General Priorities which one to pick up. The General Priority for sections is Zero Gravity Sections first, so the Microbiologist would in this case as well move into the Forward Hub to pickup the Bludgeon.*

## ELIGIBILITY

The concept of Eligibility applies to all entities and actions in the game and is observed at all times. Bots will only consider characters, sections, items, and any other entity in the game as options if they can be used for the action following the rules. If an entity is not eligible, then the Bot will essentially pretend that it does not exist for the purpose of taking their turn.

This means Damaged Sections are not considered as targets for Section Actions like Manufacture, fully Occupied Pods are not considered as targets to move into, Helmeted Humans are not considered as targets with a Bludgeon attack, and so on. Most importantly, Characters are only considered for Activation if they are eligible to take the action.

***Example:** If a Manoeuvre says Attack a Character, then only the Characters that Possess a weapon is Eligible to perform the Action. Other Characters are only considered as a target for that Conspirator if they can be Attacked by them (e.g. Unhelmeted Humans if the weapon is a Bludgeon).*

***Example:** If an action instructs to take a Section Action, that Section Action needs to be available and usable. A Blackout would prevent Transmitting Data from the Array Control and thus making no Character Eligible to take that action, the Manoeuvre would be skipped. Another similar example is when Section Launch is the Manoeuvre's intended action, a Section that has a Section Launch Action available, is not considered if there are no Escape Pods adjacent to it that have fulfilled their launch requirements.*

***Example:** If a Bot cannot place enough influence cubes on a NPC to activate them, the NPC isn't Eligible for being influenced and therefore not considered.*

## RUNNING THE BOTS

Bots follow a Script to decide which Character to Activate. Some Bots will have multiple scripts and instructions on which script to use for the current Minute. Each script consists of multiple numbered lines, each is called a **Manoeuvre**. Bots will attempt to resolve a single Manoeuvre in their Activation Phase. Starting at the first Manoeuvres and working their way down the list, attempting to resolve the first Eligible Manoeuvre.

### Activation

The Bot will only consider Characters for Activation if they are a Conspirator that has the means to complete the Manoeuvre in full (during this Minute). If the Actions in the Manoeuvre cannot be completed by a Character, then that Character is not considered as an option for Activation. Eligibility for Characters is checked at the beginning of a turn before the Manoeuvre is taken, potential changes of the board state during the Bot's turn are not considered.

NOTE: Characters can become a Conspirator during an Activation through the Activation command "Influence" see below.

*Example: If the target for an Attack is a Robot in a Section that is on fire, a Human Character would not be Eligible unless they are Helmeted. If the Conspirator could Pick Up a Helmet on the way does not matter to the Bot, it only considers the Characters Eligibility at the moment the Script is read.*

### Character Activation

First, in brackets [ ] is information on which Character to consider for Activation. As mentioned, if no Character that matches this is Eligible, continue to the next Manoeuvre until one that has an Eligible Character is found.

Activation terminology/iconography:

- **[+]**= Icons or terms before and after the "+" combined needs to be true for Eligibility. [👤 + 🚫], (Exile does not Possess Evidence).
- **[CON]** Only considers Conspirators (including the PC itself). No special limitations other than Eligibility.
- **[🧊] = [Influence]** If the Bot has cubes left, Considers all Characters for Activation, except other players' PCs. If needed, and if the Bot has enough cubes left, it adds cubes to chosen Eligible Character to instantly make it a Conspirator.
- **[Character Icon]** Only considers a specific character for activation.
- **[Ability name]** Only considers Characters that have a certain Ability.
- **[👤]/[🚫] = [Possess Item/Data] / [Not Possess Item/Data]** Only considers Characters that Possess / do not Possess the specified Item or Data. Often Possessed by specific Characters eg. [👤 + 🧊]
- **🕒** = Considers Conspirators that can do the Action **this Minute**.
- **[🕒 / 🚫] = [This Minute / Unexhausted]** Considers Conspirators that can do the Action this Minute and then, if no such exists, consider Unexhausted Conspirators.

*Example: If the Manoeuvre starts with [👤 : 🕒] then Astrochimp will be considered for Activation only if he has a Helmet.*

*Example: If the Manoeuvre starts with [🕒 / 🚫 : 👤 : Officer: 🕒], a Live PC and all Live NPC with the Officer Ability and a Helmet that can complete the Manoeuvre this Minute or that is Unexhausted will be under consideration for Activation.*

### Standardized Scripts (Abandon Ship and Revive)

There are standardized Scripts that are used by multiple Bots and found on extra cards. They are generally listed as Manoeuvres in Scripts. In this case follow the standardized Script when mentioned in the Manoeuvre, and return to the previous Script if no Manoeuvre could be taken on the standardized Script. "PC" in this case should be replaced by the Bot's PC's name.

Skip Revive Script Manoeuvre if the Bot PC is not Down.

Skip Abandon Ship Script Manoeuvre if Abandon Ship has been triggered.

### Actions

The Manoeuvres section of the Scripts state the Actions the Bot will take. The Actions noted in the Scripts are the same as the Basic, Section and Console Actions found in the Reference Manual or Character Dossier.

### Steps

One of the most frequent actions for any Character in Stationfall is Step. Almost all Manoeuvres require Bots to take Steps towards a Section in which the desired Action can be taken. When moving towards a target Section, the Bot will take Step Actions with the Activated Conspirator or controlled Character using the shortest route, spending the least Actions to get as close as possible to the target. In addition:

- The need to take Steps to reach a target is not explicitly noted in Manoeuvres but implied, meaning Bots always spend Actions on Step when needed. The exception is when Step is the Maneuver's main Action/only verb.
- Bots take Steps utilizing the Airlock Action to Step to or from Outer Space, treating Outer Space like any other Section with a Hazard.
- During a Bot's turn, all characters have the Breach Ability (1 Action removes an adjacent Lock). Note that If other Abilities are more Action efficient, such as Officer, that Ability is used instead.
- Bots do not drag Down Characters with them.

Below is a commented example of the complete Script of Troubleshooter Bot. After each Manoeuvre there is an indented text that comments on how this Manoeuvre is to be interpreted. If several Characters, Sections or Items are Eligible, follow Bot's General Priority rules.

### 1: [This Minute / Unexhausted] Jury Rig Pod (remember Talk Them Through It)

Only Eligible **IF** there is a Damaged Pod. Activate a Conspirator **IF** they can Step to and Jury Rig it this Minute or if they are Unexhausted. Step towards a damaged section and Jury Rig it if they have Actions enough.

### 2: [CON] Hazard Suppression REPEAT (Ignore Magnetic Containment)

Only Eligible **IF** there is a suppressable Hazard (Fire or Asphyxiation) in any Section except Magnetic Containment. Activate a Conspirator. Step towards the closest Section where Hazard Suppression can be taken (in Mainframe and Security Station, remember that Characters' Abilities apply, such as Hacker or AI). Take the Hazard Suppression Action if they have Actions enough. In case Hazard Suppression is done and there are still one or more Actions left, Hazard Suppress again.

### 3: [This Minute/Unexhausted] Remote Control [Drones] to Pod REPEAT

Only Eligible **IF** Drones are in the game and a Conspirator can make them reach a Pod. Activate any Conspirators **IF** they can Remote Control a Drone to Step to a Pod this Minute or if they are Unexhausted. Step the Drone towards a Pod. In case one Drone reaches a Pod and there are still one or more Actions left, Step with the other Drone towards the Pod.

### 4. [Troubleshooter:Unexhausted] Pod THEN Timed Launch

Only Eligible **IF** there is a Pod left and Troubleshooter is unexhausted. Note that it is not required that it is possible for Troubleshooter to Launch the Pod (that Abandon Ship is triggered for example) since the Timed Launch part of the operation is after "THEN". Activate Troubleshooter and Step towards a Pod. In case the Pod is reached and there are actions left, Timed Launch.

### 5: GOTO Abandon Ship Script

Unless Abandon Ship is triggered check the Abandon Ship Script Manoeuvres in order. If none are Eligible continue to Manoeuvre 6.

### 6: [This Minute / Unexhausted] Launch [Pod:2 or more Occupants]

Only Eligible **IF** there is an Eligible Pod left, meaning it has its Requirements for Launch fulfilled and it has 2 or more Occupants. Activate any Conspirators **IF** they can Launch an Eligible Pod this Minute or if they are Unexhausted and can Launch an Eligible Pod. Step to where the Eligible Pod can be Launched and if this Section is reached and there are still one or more Actions left Launch it..

### 7: [Unexhausted] Pod THEN Timed Launch

Only Eligible **IF** there is a Pod left. Activate any Unexhausted Conspirators and Step towards the Pod. In case the Pod is reached, and there are still one or more Actions left, perform Timed Launch.

### 8: [Influence:Unexhausted] Pod THEN Timed Launch

Only Eligible **IF** there is a Pod left. Consider all Unexhausted Characters for Activation, except other player's PC's (including other Bot players). As always follow General Priority if there are several options. If the one chosen Character is not a Conspirator, add cubes to it enough to make it a Conspirator and Activate it. Step towards the Pod. In case the Pod is reached, and there are still one or more Actions left, Timed Launch.

### 9: GOTO Revive Script

Only Eligible **IF** Troubleshooter is Down. Check the Revive Script Manoeuvres in order.

If none are Eligible, Bot Renegotiate.

## STATIONFALL

### Reveal

All Bots are Revealed already, all players that are not Revealed do so and perform any immediate effects.

### Deliver Data

At the Deliver Data part (after Stationfall) each Escaped Bot PC Delivers Data they Possess to Authorities and News as follows:

- Evidence to Authorities if they are Guilty and Possess Evidence.
- Any Data to an Offsite that scored points according to their Agenda.
- If they are not Guilty and/or if they cannot score any points for themselves or lower any human players points from Data delivery, they do not Deliver Data.

### Scoring

Scoring is identical to the Stationfall rules, but the Bots have their own scoring Agenda listed on their card. Bots do not have a Bribe and no Bonus Character (BC). The Bots never suffer point loss from cubes since they all have an Influence limit of 8.

SPECIAL CASES

The following section describes rules of how the Bots make decisions and how they interact with Items, Sections, and other Characters. It contains terminology found in the scripts and is ordered alphabetically to make it easier to search.

Bribes and Kompromat

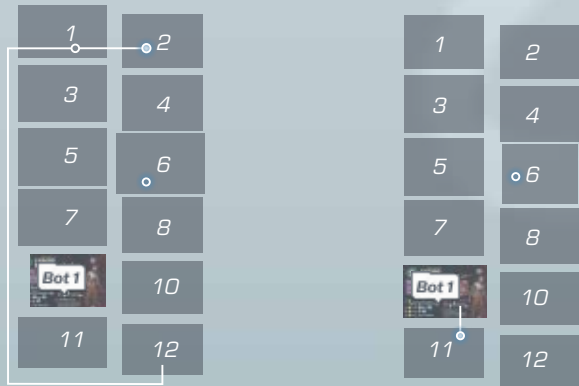

Unless mentioned otherwise Bots will Pick up Kompromats but never reveal or use the ones they Picked up. Nor will they accept a Kompromat or a Bribe offered to them or become Suspect because of it.

Character Order

The order in which the Character cards were placed during setup. Keep Character cards in 2 columns next to the board. Their order is numbered in rows, so the cards in the first row are 1 and 2, in second row 3 and 4, etc. When looking through Characters in order, the numbers may wrap around from the highest number back down to 1.

When a Bot targets a Character based on the Character Order, it means that the next Character in order from the Bot PC’s card position.

*Example: There are 12 characters in play. Cyborg Bot is the 9th character in Character Order. An action taken by the Cyborg Bot has two equally valid targets and the tie-breaker is Character Order. The targets are the 2nd and 6th characters in Character Order. Starting with Cyborg’s position (9th), the target will be the 2nd Character (10, 11, 12, wrap around, 1, 2). If the options were the 6nd and 11th Character, it would instead be the 11th as it is closer following after Cyborg’s position in Character Order.*

Firebombs

When instructed to use the Attack or Sabotage Action, Bots will also consider the option of Throwing a Firebomb as an Attack or Sabotage

**Free Pick Up** is considered and used during Manoeuvres following all the rules for Bots. If the Manoeuvre does not instruct to Pick Up a specific Item, or the free action isn’t used for picking up an item, then the Bot will choose to Pick Up the highest priority Item (according to General Bot Priority) found in the Sections that it Steps through this Minute. Bots will not use the Free Pick Up to aid themselves with their desired Action, meaning they won’t Pick Up a Helmet with the intent of moving into a Section with a Hazard. If the Free Pick Up isn’t used for a Pick Up specified by the Manoeuvre, then the Bot picks the Item

solely based on Item Priority in disregard of the Manoeuvre that the Bot is performing. If they already have reached their Item Limit, they will not use the Free Pick Up (unless instructed otherwise).

**ZeroBorn** is considered and used during Manoeuvres following all rules about Steps for Bots. If ZeroBorn isn’t used, then Free Pick Up is. If the Manoeuvre is to Step to a Section or target it will prioritize to get to target using Zeroborn, before doing a Free Pick Up.

**Scientist** Free Section Action is considered and used during Manoeuvres following all rules about Steps for Bots. If Scientist isn’t used, then Free Pick Up is.

**Emergency Response / Adrenaline** is taken into account when measuring distances using Steps.

Legal, NDA

In games with Legal, Bots will ignore the Requirement of NDA to launch Pods and launch Pods as if Legal was not in play. This specifically only applies to Bots on their turn and not to human players.

Pods and Launch Actions

Pods fall under the Eligibility rule for purposes of launching and stepping into them. Meaning that Bots only consider Pods that the Activated Character could launch, If the Manoeuvre instructs them to Step towards a Pod to launch it. Pods with specific requirements like Medivac Pod are only considered if the Character is Eligible, meaning they can launch them when the Script is read.

Self Preservation

Standard rules for Character Self Preservation apply to all Bot Conspirators. In addition (unless stated otherwise in the script) Bots won’t take Actions with a NPC or Project X to Down their own PC as an immediate result of that Action.

Stranger Bot Annihilation

If Stranger Bot is Annihilated, the Bot Player will Reveal as one of their BC. If none of them are flipped, Flip one and that is the new Bot Character. If any BC are flipped choose 1st BC as the Bot. If first BC is Annihilated, choose 2nd. Exchange Stranger’s script card with the newly revealed Bot script card and flip that Character card to it’s Bot side. Discard excess BC card.

MISTAKES WERE MADE?

You might find yourself in a situation in which you notice that a Bot should have taken a different Action last Minute or in any other of the previous Minutes. This is fine and you should not attempt to correct mistakes, but rather just continue to play with the correct rules going forward. It might happen, but as long as you’re trying to follow the rules it will be fine.
