

VIRGINIO GIGLI

FLAMINIA BRASINI

SIMONE LUCIANI

GOLEM

It is Prague, 1584. In the dark attic of the Synagogue, Rabbi Loew walks nervously. Piles of books on a desk, gold melting in the cauldron, and a mass of clay shaped into human form. "Now the last step," exclaims the Rabbi, "because only with a true word will you come to life!" As the word "Truth" is engraved on the clay giant's forehead and the word "God" is put into its mouth, a great silence descends upon the room. The eyes open, illuminated by a sinister light, and stare at the Rabbi's gaze, waiting for its first order.

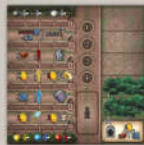

The legend of the Golem is one of the most fascinating stories in the world and has its roots in the Jewish tradition. In Golem, this story inspires a strategic and complex game in which players take on the role of scholars focused on recreating the famous clay automas.

Use your knowledge (represented by the first letter of the Hebrew alphabet "Aleph") to study traditional books, collect gold and melt it down to create powerful artifacts, bring tireless Golems to life and send them to the city to do important jobs. You will need to maintain control of your Golems by using your students and spending the knowledge you have gained. You can also choose to kill your Golems to avoid paying for their maintenance.

COMPONENTS

1 Main board

1 Synagogue board

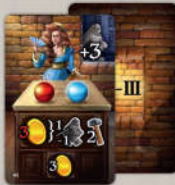

1 Synagogue structure
(5 cardboard pieces and 1 plastic tray)

15 colored marbles
(3 yellow, 3 red, 3 blue,
1 black, 5 white)

12 Action tiles

12 Character cards
(7 for rounds I-III and
5 for round IV)

27 Objective cards

38 Book cards
(8 in each of the 4 colors and 6 black)

30 Neighborhood tiles
(10 for each district)

For each player:

1 Rabbi 3 Students

6 Golems 4 Player markers

6 Artifact Development tiles

6 Golem Development tiles

1 Player board

1 Summary card

6 Study Development tiles

Clay tokens
(25x 1-clay, 5x 3-clay,
7x 5-clay)

Coin tokens
(25x 1-coin, 5x 3-coin,
7x 5-coin)

Knowledge tokens
(25x 1-knowledge, 5x 3-knowledge,
7x 5-knowledge)

40 Gold pieces

4 Pass tiles

18 Starting tiles

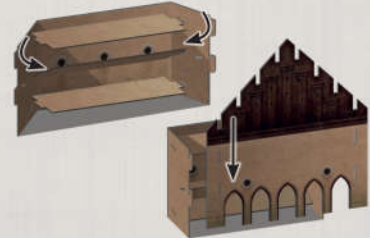

3 Menorah tokens
(1 yellow, 1 red, 1 blue)

4 Artifact tiles

Assembling the Synagogue structure

Before your first game; fold the back piece and insert the three central pieces into the holes. Slide the front piece, clipping it into the hooks. You may leave the Synagogue built from one game to another, putting it back into the box carefully.

SETUP

Golem is a complex game that has a lot of variable setup options. There is an introductory setup to help you learn the game; this setup is shown in special boxes, which replace the corresponding setup phase. Once you are familiar with the rules, you will be ready to set up the standard game (*without referring to the introductory boxes*).

1. Place the **main board** in the center of the play area.
2. Place the **Synagogue** board and structure next to the main board, within reach of all players. The tray of the Synagogue structure must line up with the actions on the Synagogue board as shown.
3. Place the **Pass tiles** next to the Synagogue board.

Introductory 4

Find the Character cards 39, 43, 41, and 46 and place them from left to right into the Palace, face up.

4. Separate the **Character cards** into 2 decks, using the round number icons on the backside, to create a I-III and a IV deck. Shuffle each deck separately. Deal 1 Character card from the IV deck into the rightmost space of the Palace, face up. Deal 3 Character cards from the I-III deck into the other 3 spaces, face up.
5. Shuffle the **Book cards** to form a face-down deck and place the deck on the Library. Deal 5 cards, face up onto the display next to the deck.

Introductory 6

Separate the Neighborhood tiles by color. Find the following Neighbourhood tiles and place them left to right in each district.

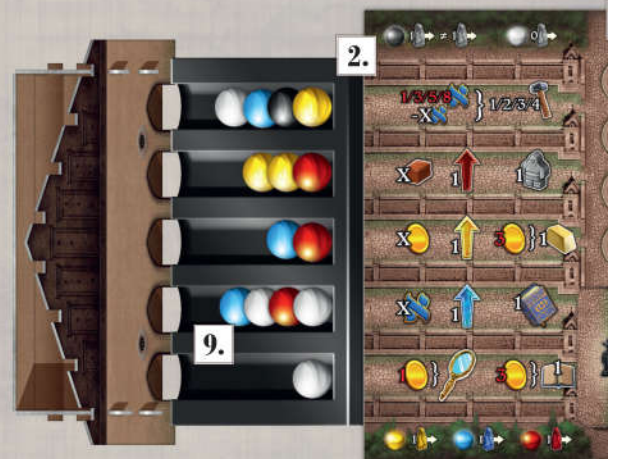

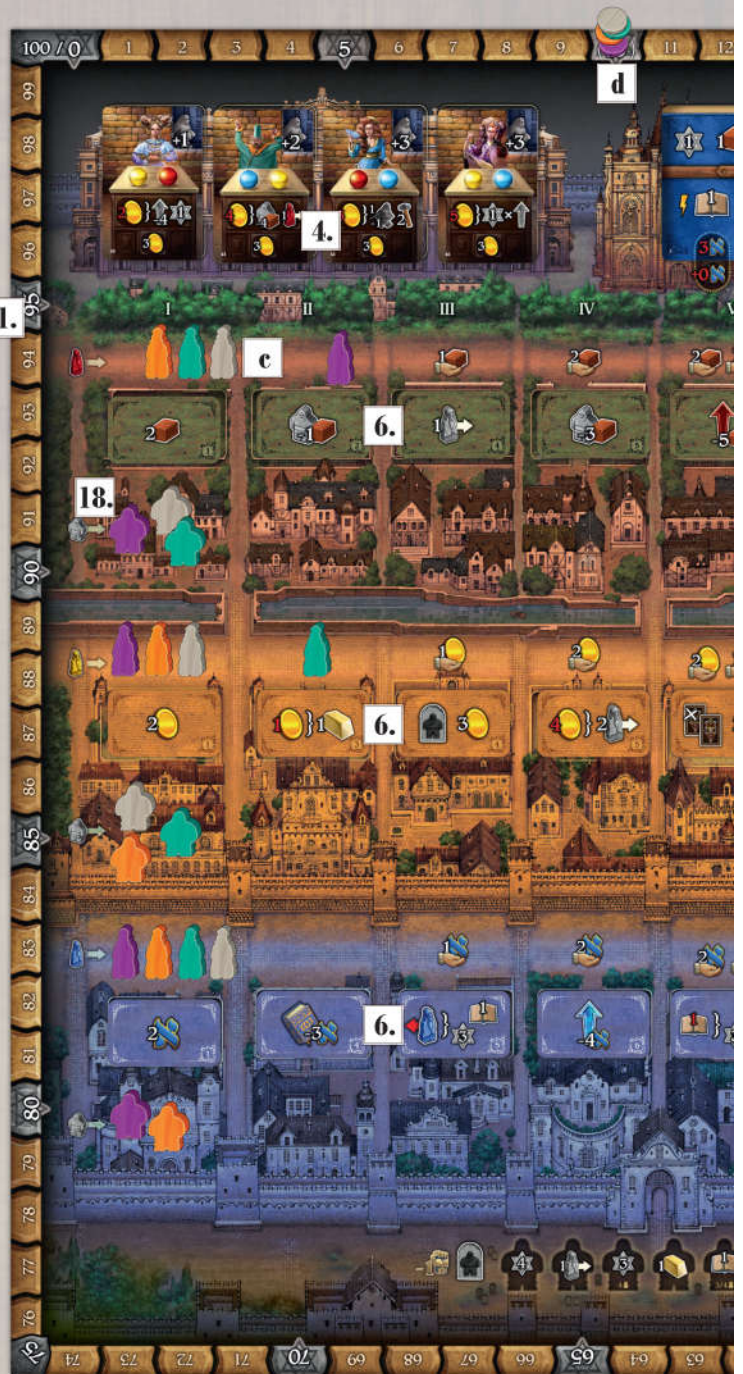

Red District- 1 2 4 5 7 8 9

Yellow District - 1 3 4 5 6 7 10

Blue District - 1 4 5 6 7 8 9

6. Separate the **Neighborhood tiles** by color and shuffle each stack separately. Deal out 7 tiles of each type onto the Neighbourhood spaces in the matching district. Arrange the tiles into ascending numerical order, from left to right.

12. Give each player a **Player board** and all the components of their chosen color.

a) Place all your **Development files** onto your board in the marked spaces.

i) 5 of the Study Developments are placed across the top of your board. Place each tile on its matching space, grey side up. The final Study Development forms part of your Study track and is placed so that the cost icon is showing face up.

ii) The Golem Developments are placed over the Golem image at the bottom of your board, grey side up.

iii) The Artifact Developments are placed on the right of your board. Place the two small gold tiles at the top, followed by the 3 grey tiles, with the larger tile at the bottom, with the cost icon face up.

b) Place **4 Golems** onto your board in the marked spaces, set aside the remaining 2, these will start on the main board, see below.

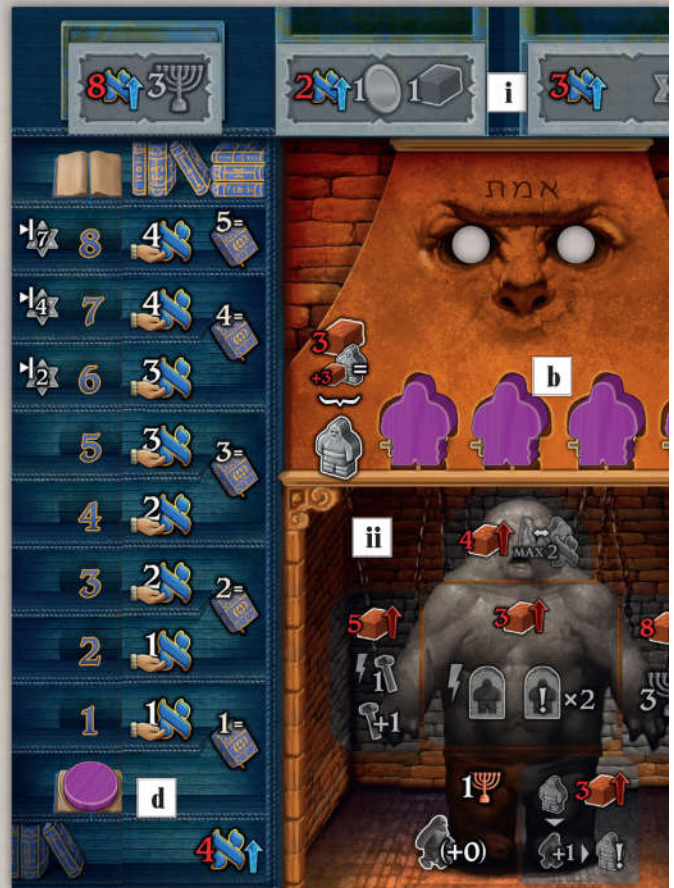

c) Place a **Student** in the first space of each of the 3 streets on the main board.

d) Place a Player **marker** on space 0 of your Study track (blue), a Player marker on the 3rd space of your Golem Track (red), a Player marker on space 10 on the VP track on the main board, and a Player marker on the Turn Order track on the Synagogue board.

e) Place your **Rabbi** and Summary card next to your Player board.

13. Randomly determine the turn order, arrange your Player markers from top to bottom in this order on the Turn Order track.

12.

14. Deal 4 Starting tiles to each player.

15. Deal 4 Objective cards to each player. Draft these cards, selecting one card and passing the remainder to your left, until each player has selected 4 cards. From the final 4 cards, choose 3 to keep and discard 1, returning it to the bottom of the deck.

Introductory 14 | 15 | 16

Give the first player:

Give the third player:

Give the second player:

Give the fourth player:

Here illustrated the introductory setup for the second player

16.

15.

17.

16. Take a number of Artifact tiles equal to the number of players and place them on the table with a random side face up. In reverse turn order, choose an Artifact tile and place it on the right of your player board without changing the side.

17. Choose two of the four Starting tiles and take all of the resources and benefits shown. Return all the Starting tiles to the box.

Introductory 17

Each player takes the resources or benefits shown on both of their Starting tiles.

As a result the first player (*green*) will take 3 Coins, 2 Clay, 1 Knowledge, move their Student in the yellow district forwards 1 step and place 1 Gold on their 1-Gold Artifact, completing it and taking 1 more Knowledge (see page 10).

The second player (*purple*) will take 3 Clay, 2 Coins, 2 Knowledge, upgrade the left leg Golem Development (see page 18) and move their Student in the red district forward 1 step.

The third player (*orange*) will take 3 Clay, 2 Coins, 2 Knowledge, move their marker up 1 step on the Study track and upgrade the left most column Study Development.

The fourth player (*grey*) will take 3 Clay, 1 Coin, 2 Knowledge, place the 2-Coin income Artifact Development (see page 19) and 1 Gold on their 3-Gold Artifact.

Introductory 18

The first player (*green*) places a Golem in the first block of the red and yellow districts

The second player (*purple*) places a Golem in the first block of the red and blue districts

The third player (*orange*) places a Golem in the first block of the yellow and blue districts

The fourth player (*grey*) places a Golem in the first block of the red and yellow districts

18. In turn order, each player places their 2 Golems onto the leftmost blocks in any 2 districts of their choice. You can't place your Golems in the same district.

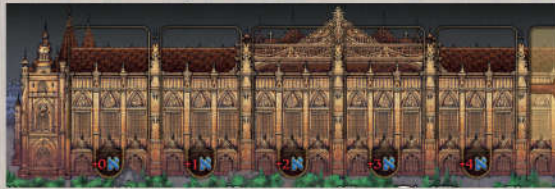

OVERVIEW

The main board represents the city of Prague, divided into several areas.

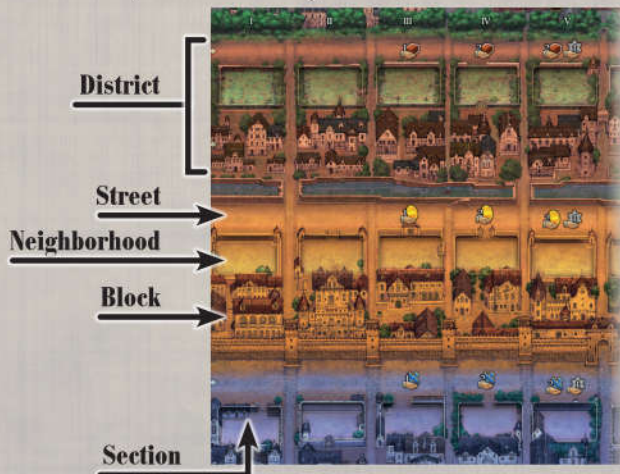

The Palace - There are 4 Characters placed here, the first face up card from the left is the active Character for each round of the game.

The Library - Here you can buy Book cards to activate their effects and increase your collection.

The center of the board is divided into the **3 districts** of Prague; each district is in turn divided horizontally into 10 sections numbered from 1 to X. Each section of each district features a street (*which is traveled by Students*), a neighborhood (*where Neighborhood tiles are placed*), and a block (*which is traveled by Golems*).

Below the districts is the **Cemetery**, where you can bury your Golems.

Beside the main board is the **Synagogue**. You go to the Synagogue to take actions. 5 actions are powered by the colored marbles, while others are taken by the Rabbi when it's placed on the Action tiles.

Each player has their own player board which represents their studio. Your player board is divided into **3 colored areas**, each linked to a particular field of research. The blue area represents bibliographic research, the red area represents the study and creation of Golems, and the yellow area represents the creation of powerful artifacts. In each area Development tiles represent particular abilities that you can activate and allow you to collect Menorah symbols which are fundamental for the final scoring. You have 2 tracks; the Study track and the Golem track. Your books are stored in columns above your board and your unique artifacts are found on the tile to the right.

During the game you will build Golems that move through the city's blocks performing actions, study ancient books to gain their bonuses, and buy gold to create powerful artifacts. Throughout the game you will try to collect Menorahs to multiply your end game score. After 4 rounds, the player who has accumulated the most Victory Points (VP) will be declared the winner.

Earning Victory Points 1

There are several ways to earn Victory Points (VP) during the game (*for each VP you earn, move your marker on the VP track 1 step forward*):

- Making the Golems work in specific neighborhoods
- Performing specific actions with the Rabbi
- Buying specific Book cards
- Completing specific Artifacts
- Paying specific Characters
- Through the income of your Students and on your Player board
- Burying your Golems in specific spaces

At the end of the game, players will earn additional VP for:

- Multiplying the number of Golems created by the number of red Menorahs accumulated
- Multiplying the number of Artifacts completed by the number of yellow Menorahs accumulated
- Multiplying the number of columns of Books by the number of blue Menorahs accumulated
- Reaching the last spaces of the Study track
- Meeting the demands of your Objective cards
- Leftover resources

GAMEPLAY

Each game is divided into **4 rounds**, in each of which there is an active Character card in the Palace. Each round is divided into **7 phases**, to be played in order.

1. Refresh
2. Golem Movement
3. Actions
4. Turn Order
5. Influence Characters
6. Income and Development
7. Golem Control

1) Refresh

Skip this phase in the first round.

Complete the following steps:

1. Gather all of the **marbles** and place them back into the Synagogue structure. Put all the marbles in at the same time to ensure they are distributed properly.
- 
2. Discard the Action tiles used in the previous round, placing them to one side. Deal a number of **new Action tiles** onto the Synagogue board equal to the number of players plus one. If the Action tiles run out, shuffle all of the used tiles to form a new face-down pile and continue to deal tiles as needed.
- 
3. **Remove the leftmost Book card** from the Library and put it back at the end of the deck. Shift all the remaining cards to the left and deal a new card, face up, into the rightmost space.

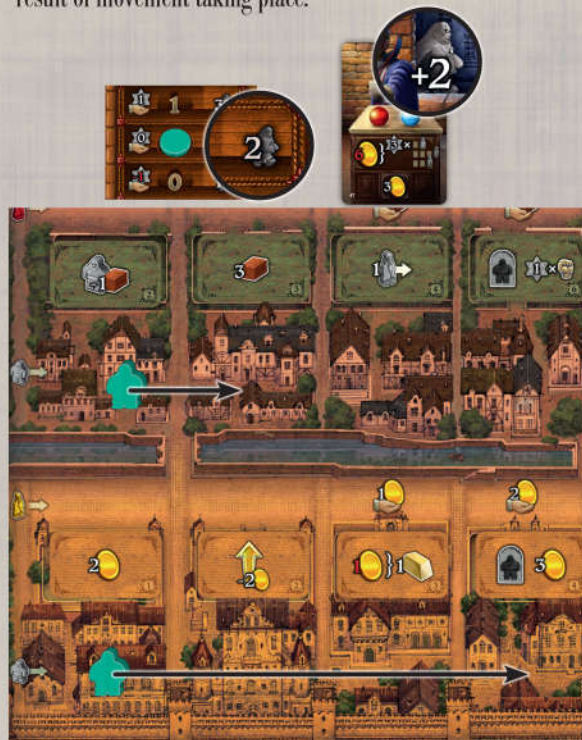

2) Golem Movement

In turn order, starting with the player on the top space of the turn order track, proceeding downwards, each player **must** move their Golems forward.

Sum up the Golem steps gained from your **Golem Track level** and the steps indicated on the active **Character card** for the current round (i.e. the first face up card from the left).

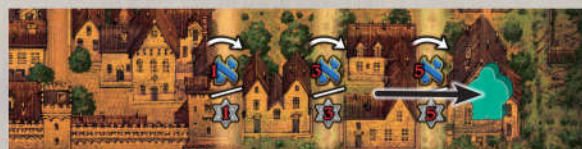

You may distribute these steps however you wish between all your Golems, you must use all the steps.

If a Golem was lying down, stand it up whenever it moves. Standing a Golem up is not considered to be a movement but a result of movement taking place.

Example: David's (green) Golem track shows 2 steps and the Character card adds another 2. He chooses to move 1 Golem 1 space forward and another 3 spaces forwards.

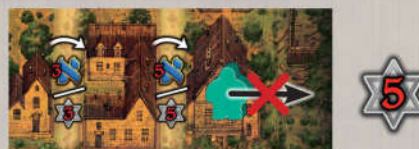

If a Golem reaches the last sections of a block (VIII, IX, and X), you must pay a cost of either VP or Knowledge to advance onto each of these sections (as indicated on the board).

Example: David (green) moves this Golem onto the final space of the yellow District. He may choose to pay either 5 Knowledge or 5 VP.

If one of your Golems reaches section X (or one of your Golems is already on section X from a previous turn) and you are required to move your Golems, you must first distribute the steps between the Golems that are not in the final section.

If all your Golems have reached section X and you have any movement remaining, for each movement that you cannot use, you lose 5 VP up to a maximum of 5 VP per Golem.

3) Actions

In turn order, each player takes an action, until all players have taken **3 actions**.

You may take an action in one of two ways:

- Selecting a marble from the Synagogue to perform a **Marble action**
- Placing your Rabbi on an Action tile to perform a **Rabbi action**

Each round you must take 2 Marble actions and 1 Rabbi action. You may decide the order of your actions in any combination. You may also pass (*see page 12*).

Select Marble Action

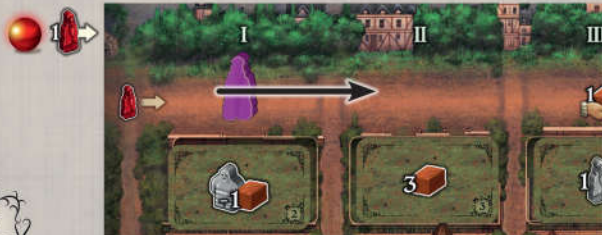

Each line of marbles is connected to one of the actions listed below. The number of marbles in each line, at the moment you select one, represents the value of that action.

Complete the following steps in order:

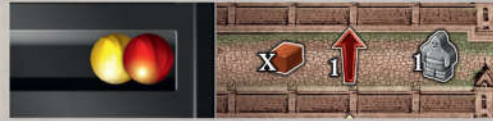

- 1) **Select any one marble** from the Synagogue and place it on your board (*inside one eye*).

- 2) If you select a yellow/red/blue marble, **move your Student** in the matching district 1 step forwards. If you select a white marble, don't move any Students. If you select a black marble, move two different Students of your choice, 1 step each.

- 3) **Perform the corresponding action at the current value.** The current value is equal to the number of marbles present before you selected.

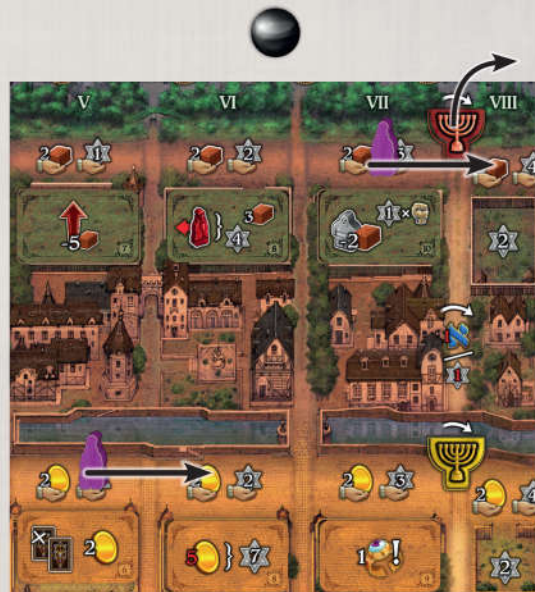

Example: If you take a marble from this line, the corresponding Golem action will have a value of 2.

Students

Your Students have 2 primary uses; the position of each Student in the Income phase may earn you a range of resources or VP and the relative position of your Students to your Golems determines how much Knowledge you need to spend to control them (*see page 13*).

In addition if any of your Students are the first to reach the VIII space of a street, you take the Menorah token from the district and place it next to your player board for end game scoring.

Note: The icons of the game refer to the color of the district, not to the color of the piece.

Example: Sara (purple) selects the black marble and therefore moves 2 Students forward. In the red district the Student moves to space VIII so Sara claims the red Menorah.

The Marble Actions

You may **activate** up to 4 of your Golems already on the board. The Golems must be standing.

Pay 1/3/5/8 Knowledge to activate 1/2/3/4 Golems. You receive a discount equal to the action value.

When you activate a Golem, lay it down and activate the effect of the adjacent Neighborhood tile (see pages 15-16).

You may decide the order in which you activate your Golems. Complete the effects of each Neighborhood tile before activate the next one.

Note: You can't activate a Golem you've just created during the Work action.

Example: Simon (orange) has a Work action with value 3. He chooses to activate 3 Golems, paying 2 Knowledge (5 with a discount of 3). He takes the actions shown on all 3 Neighborhood tiles and lays those Golems down, in any order.

Take a number of **Clay** equal to the action value.

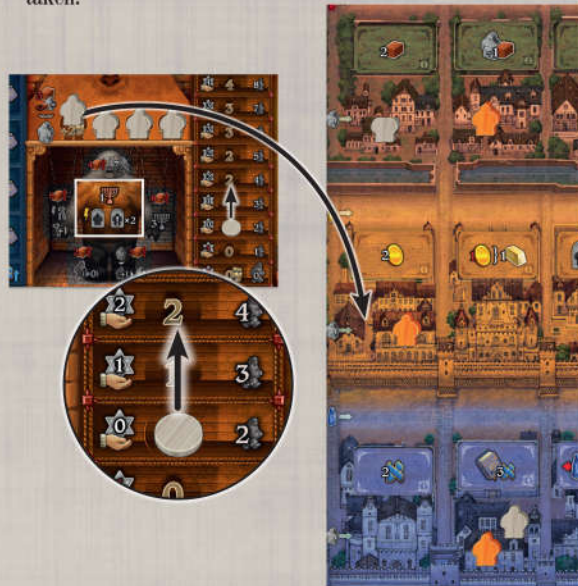

You may spend Clay to **upgrade one of your Golem Developments** on your board. Each Development has a different cost, shown on the tile (see page 18).

You may spend 3 Clay to **create one Golem**.

When you create a Golem, place it on the first space of a district. If you already have other Golems in the same district, you must pay 3 additional Clay for each Golem already present.

Move your marker up **2 steps on your Golem track** as shown on the space revealed by creating the Golem.

You may decide the order of any upgrade and create actions taken.

Example: Julia (grey) has a Golem action with value 4. She takes 4 Clay. She pays 3 Clay to upgrade the torso Golem Development and then another 3 Clay to place a Golem in the Yellow district. Had she placed the Golem in either of the other district she would need to pay 6 Clay instead. She moves her marker 2 steps up her Golem track.

Killing a Golem

During the game, you may take an action that allows you to kill one of your Golems. This not only gets you an instant bonus but may also save you Knowledge in the Golem Control phase.

When you kill a Golem, move it from a neighborhood to any unoccupied cemetery space. Immediately move your marker **1 step down on your Golem track** and receive the bonus indicated on your chosen cemetery space. Certain spaces may not be available depending on your player count. The rightmost cemetery space is considered unlimited but gives no bonus.

Artifacts

Over the course of the game you may complete up to 4 Artifacts. The right hand side of your player board shows 4 cauldrons in which you must place the Gold pieces you collect. When each of the icons in a cauldron are covered with a Gold piece, you have completed that Artifact. You **immediately** receive all the benefits shown on the matching section of your Artifact tile. You will receive these benefits again during each Income phase.

Your Artifacts may be upgraded using the Artifacts marble action or other game effects. When you upgrade an Artifact, take one of the Artifact Development tiles from your player board and place it on the corresponding space on your Artifact tile. Only the lowest Development tile shows a cost, when you upgrade this Development tile pay 3 Coins and flip the tile to show 3 yellow Menorahs. The remaining Development tiles are double-sided, you may choose which side to have face up when you upgrade them. They cost Coins based on which space you choose to place them, pay the number of Coins shown on the space. Whenever you upgrade one of these, you will reveal a yellow Menorah shown below.

The two gold-colored Development tiles are used to activate an Artifact based on the shown condition, as well as in the Income phase. The three grey Development tiles are used to increase the Artifact's effect. When that Artifact is activated, you will now earn the additional benefit shown.

Artifacts

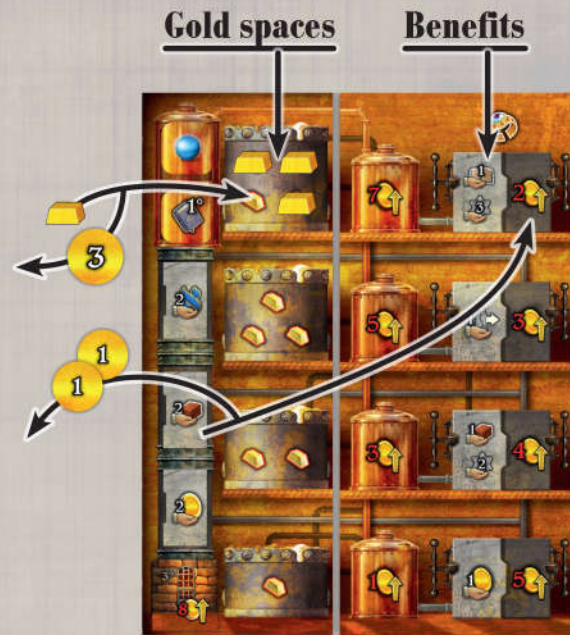

Take a number of **Coins** equal to the action value.

You may spend Coins to **upgrade one of your Artifact Developments** on your board. Each Development has a different cost, shown on the space you place it on (see page 19).

You may spend 3 Coins to **buy one Gold piece**. Place it on a Gold space on your board.

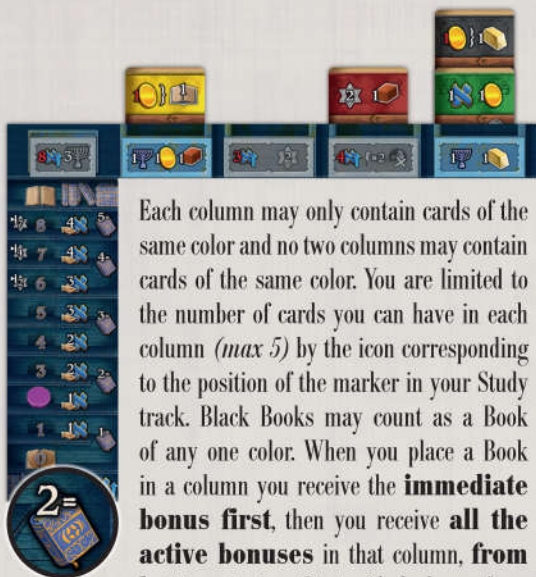

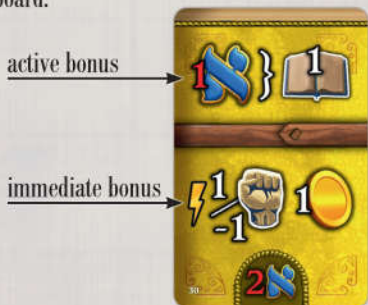

You may decide the order of any upgrade and buy actions taken.

Example: Julia has an Artifact action with value 2. She takes 2 Coins. She pays 2 Coins to upgrade the Development on the top row of the Artifacts and 3 Coins to buy a Gold piece and place it on the same Artifact. The Artifact is now complete: she immediately receives 1 step on the Study track, 3 VP and 2 Clay.

Book cards

Each Book card shows an immediate bonus on the lower half, an active bonus on the upper half, and a cost at the bottom. Each card is also one of 5 colors; red, blue, green, yellow, or black. The colored Book cards cost Knowledge and the black Book cards are paid for by moving a Student of your choice 1 step back. When you buy a Book you must tuck the card into one of the columns above your player board.

Each column may only contain cards of the same color and no two columns may contain cards of the same color. You are limited to the number of cards you can have in each column (*max 5*) by the icon corresponding to the position of the marker in your Study track. Black Books may count as a Book of any one color. When you place a Book in a column you receive the **immediate bonus first**, then you receive **all the active bonuses** in that column, **from bottom to top**. Start with the bonus from the Development tile, if it's active, then the active bonus from other Book cards, then the active bonus of the Book just placed.

You may only buy a Book if you can legally tuck it into at least one of your columns.

Study

Take a number of **Knowledge** equal to the action value.

You may spend Knowledge to **upgrade one of your Study Developments** on your board. Each Development has a different cost, shown on the tile (*see page 18*).

You may spend Knowledge to **buy one Book card** from the main board. The cost of the Book card is the sum of the cost depicted at the bottom of the card and the cost shown on the board below the card's position.

Move all the remaining cards to the left and deal a new card from the deck into the rightmost position.

You may decide the order of any upgrade and buy actions taken.

Example: Sara has a Study action with a value of 2. She takes 2 Knowledge. She chooses to upgrade the 2nd column, spending 3 Knowledge. She chooses to buy the leftmost Book card, paying 1 Knowledge and she places it in the 2nd column. She gains 1 Knowledge, then she gains 2 VP and spends 1 Knowledge to move up the Study track.

Mirror

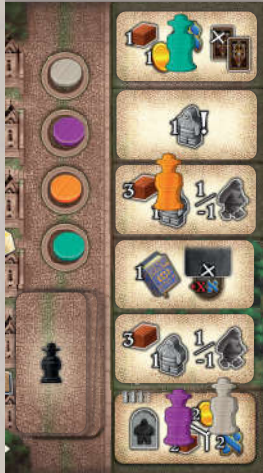

Pay 1 Coin to perform any of the other marble actions with the value of this Mirror action.

You may also pay 3 Coins to move your marker up the Study track by one space.

Rabbi action

Each round you must place your Rabbi on **1 Action tile** to carry out the action shown on the tile. Each tile may only have one Rabbi placed on it, except for the lowest space (which is permanently printed on the board), which may hold any number of Rabbis. The order of your Rabbis on the tiles will also determine turn order for the next round, from top to bottom. If more than one player places their Rabbi on the lowest action space, they place their Rabbi to the right of any already placed there.

The Action tiles will change each round. (Full details on Action tiles can be found on page 15.)

Example: David (green) has placed his Rabbi on the top-most Action tile. Simon (orange) has placed his Rabbi on the third Action tile. Sara (purple) and Julia (grey) both placed their Rabbi on the last Action, but Julia has placed it after Sara.

Passing

When it's your turn, you may choose to pass instead of performing an action. Players usually decide to pass when they need to perform an action that has no marbles on it.

Take the **lowest** numbered **Pass tile** available. After all other players have performed their 3 actions or have passed, the Passing phase begins. In this phase, players who passed must perform their remaining actions.

If you have the number 1 Pass tile, remove 1 marble of your choice from the marbles remaining in the Synagogue and place it on the Pass tile.

The player in charge of putting the marbles back into the Synagogue will be either one of the players who did not pass, or the player with the highest Pass tile, in case all players passed.

Players will play as many turns as they need to complete all their remaining actions following the **Pass tile order**. Players may pass a second time when it's their turn.

Should any player pass for the second time, it will be necessary to start another (and final) Passing phase. The player with the number 1 Pass tile will remove another marble and the remaining marbles must be put back into the Synagogue.

At the end of the Passing phase, put all the Pass tiles back near the Synagogue board.

Sara

David

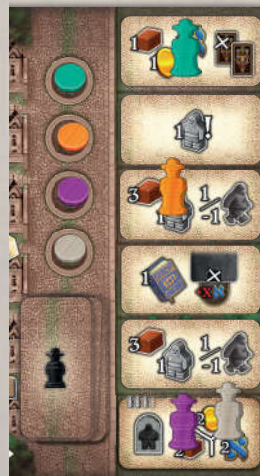

Example: Sara and David choose to pass during the round, while both of them have a remaining marble action to be performed each. Once all other players have taken their actions, the Passing phase begins. Sara chooses to remove 1 white marble, placing it on the '1' tile. Julia collects all the remaining marbles and puts them back into the Synagogue. Sara doesn't like the new marble composition and decides to pass again. On the contrary, David plays his turn selecting a marble to perform his remaining action. At this point, the second and final Passing phase begins; Sara removes a red marble, Julia collects all the remaining marbles and puts them back into the Synagogue once again. Sara must now take her last action.

4) Turn Order

Reset the Turn Order track. Arrange the Player markers in the same order as the Rabbi pieces on the Action tiles, from top to bottom. If multiple Rabbis are placed on the lowest permanent action, the player markers are placed following the Rabbi order from left to right. After setting the turn order each player collects their Rabbi and returns it to their player area.

Example: The Actions phase ends in this situation. David (green) becomes first, Simon (orange) becomes second, Sara (purple) becomes third and Julia (grey) becomes fourth.

5) Influence Characters

In turn order, each player checks the **Character card** for the current round, it will be the leftmost face-up card. Each Character card shows a combination of 2 colored marbles. If during the current round, you have selected the **same combination of marbles**, you will be able to influence the Character. Note that the white marble counts as any color and the order of marbles on the card doesn't matter.

If you influence the Character, you must either:

- pay Coins to take the specific bonus or,
- take 3 Coins.

(See page 17 for details on the available Characters.)

Once all players have done this, flip the Character card face down.

Example: Sara selected a red and a blue marble during the Actions phase. The Character card for the current round shows the same combination, so Sara can influence it. She decides to pay 3 Coins to take the bonus.

6) Income and Development

The  icon indicates any income you receive. This may be VP, steps with your Students, steps on the Study track, or resources.

You **receive all the income** from:

- the position of your Students on each of the 3 streets 
- the completed Artifacts on your board 
- the position of your marker on your Study track 
- the position of your marker on your Golem track 

Example: With the situation illustrated above, Sara (purple) would receive 4 Coins, 6 VP, 1 step up the Study track, and 2 Knowledge (for the new position on the Study track).

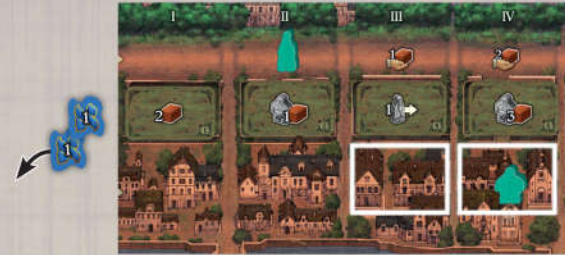

You may choose the order in which you collect your income.

After all players have collected their income, you may pay to **upgrade one Development of your choice**, paying the normal cost as explained under the marble actions.

7) Golem Control

You must now **pay Knowledge to control your Golems**.

For each Golem you must pay 1 Knowledge for each section the Golem is ahead of the Student in the same district. You count the section the Golem is in but not the section the Student is in.

Example: David (green) must pay 2 Knowledge to control the illustrated Golem, which is 2 sections ahead the green Student in the same district.

If you do not have enough Knowledge to control all of your Golems, spend all the Knowledge you have and lose 5 VP for each Golem that you cannot afford to fully control.

Example: David (green) must pay 5 Knowledge to control his Golems. He has only 3 Knowledge, that he pays to control the Golem in the blue district. Then, he must discard the remaining Knowledge, which is not enough to control the Golem in the red district, and lose 5 VP. The Golem in the yellow district is controlled for free.

If you have just completed the fourth round, proceed to Final Scoring. If not, start a new round with the Refresh phase.

END OF THE GAME & FINAL SCORING

The game ends after the Golem Control phase of round 4.

Each player scores **VP** as follows:

- Multiply the number of Golems you have built (*the starting 2 Golems are not counted*) by the number of red Menorahs you have (*these are found on your Development tiles and the Menorah tokens*).
- Multiply the number of Artifacts you have completed by the number of yellow Menorahs you have (*these are found on your Development tiles and the Menorah tokens*).
- Multiply the number of columns of Book cards (*with at least 1 Book*) you have above your player board by the number of blue Menorahs you have (*these are found on your Development tiles and the Menorah tokens*).
- As shown on the upper 3 spaces of the Study Track.
- VP from your completed Objective cards.
- 1 VP for every 5 resources of any type.

The player with the most Victory Points is declared the winner. If there is a tie, the tied player whose Rabbi is placed in the uppermost space wins.

Example: With this final situation, Sara will score:

- 4 VP for the Golem area (2 Golems built x 2 red Menorahs)
- 21 VP for the Artifact area (3 completed Artifacts x 7 yellow Menorahs)
- 15 VP for the Study area (3 columns with Books x 5 blue Menorahs)
- no VP from the Study track
- 1 VP for resources left
- 4 VP for the Objective card requiring 8 gold pieces, 4 VP for the card requiring 7 Developments, no VP for the card requiring 3 Golems
- 2 VP for completing two different types of Objective cards

Objective cards

Each Objective card is split into 3 parts. The top part shows you what you need to do to complete the Objective. There are various types and may relate to the final position of one of your students, a number of Golems, Books, Gold, or Developments you have, or your position on a track. If you meet this criteria you score the VP shown in the middle part of the card (*see page 17*).

The bottom part of the card shows a reminder of the additional VP you will earn for each different type of Objective you have completed. For completing 2 different types of Objective you score 2 VP, 3 different types you score 5 VP, and 4 or more different types you score 9 VP.

Two Objectives are considered to be of the same type if they show the same icon (*even if with a different number*) on the top part.

APPENDIX

All the bonuses in the game are optional: when you activate one, you can decide to take it partially or not take it at all.
The only mandatory effects in the game are the Golem movements in Phase 2 and the Golem track movements when creating or killing a Golem.

Action Tiles

	Move your marker up or down the Golem track by 1 step & earn 1 VP and 1 Knowledge per level on your Golem track		Move 1 of your Golems up to 4 steps forward & activate it (it must be laid down) & this round you do not pay Knowledge to control your Golems
	Take 1 Gold piece & earn 1 VP for each completed Artifact		Move your Golems a total of 2 steps either backwards or forwards & activate 1 Golem (it must be laid down)
	Take 3 Clay & create one Golem (paying normal cost) & move one Golem backwards or forwards 1 step		Move your marker up the Study track 1 step & take 1 active bonus from 1 of your Book cards
	Buy 1 Book card without paying the cost printed on the card (you still pay the cost printed on the Library position)		Take the action of a Neighborhood tile adjacent one of your Golems (either standing or laying) without activating it
	Kill one Golem & earn 1 VP and 1 Clay for each Golem you have in the Cemetery		Take 1 of each resource & draw 2 Objective cards and choose one to keep (put the other back at the end of the deck)
	Upgrade any 1 Development with a discount of 3 resources, you may pay any combination of resources for the remaining cost		Move any 1 Student forwards 1 step & earn VP equal to the position of your leftmost Student (for example, 2 VP for section II)

Red District Neighbourhood Tiles

	Take 2 Clay		Kill 1 Golem & earn 1 VP per level on your Golem track (after the potential killing and also if you don't kill)
	Create 1 Golem with a discount of 1 Clay		Upgrade 1 Golem Development with a discount of 5 Clay
	Take 3 Clay		Move your Student in the red district backwards 1 step to earn 4 VP and take 3 Clay
	Move any 1 Student forwards 1 step		Spend 3 Clay to earn 6 VP
	Create 1 Golem with a discount of 3 Clay		Create a Golem with a discount of 2 Clay & earn VP per level on your Golem track

Yellow District Neighbourhood Tiles

	Take 2 Coins		Draw 2 Objective cards and choose 1 to keep (put the other back at the end of the deck) & take 2 Coins
	Upgrade 1 Artifact Development with a discount of 2 Coins		Move your Student in the yellow district backwards 1 step to earn 3 VP and take 1 Gold piece
	Spend 1 Coin to take 1 Gold piece		Spend 5 Coins to earn 7 VP
	Kill 1 Golem & take 3 Coins		Activate any 1 completed Artifact

3 yellow Menorahs for final scoring

CREDITS

The designers wish to thank all the testers who supported the long development of this project with their comments, ideas, advice and passion. In particular, they thank Samantha Milani, Antonio Tinto, Stefano Luperto, Sabrina Volpini, Davide Malvestuto, Francesca Giusti, Gaetano Cellizza, Luca Ercolini, Nestore Mangone, Ilaria Negri, Alessandro Negri, Enrico Risoluto, Franco Mari, Luigi Pocheschi (Shaka), Michele Morosini, Marco Piola Caselli, Ennio Pantani, Domenico Stellato, Fabrizio Neri, Matteo Le Foche, Ido Traini, Daniel Marinangeli, Simone Fini, Giacomo Censi, Claudio Cicalà, Paolo Toffanello, Nadia Curi, Simone Scalabroni, Paolo Prioretti, Michele Rozzi, Daniele Tascini, Julie Carpinelli and Simone Colombo.

Special thanks to Tommaso Battista, Marco Pranzo, and Gabriele Ausiello who followed Golem with patience, skills, and friendship from its first, unsteady steps through Prague's streets.

Last, immense gratitude goes to Mauro Gibertoni for his suggestions on the Automa, a subject in which he is a master.

The editor wishes to thank Klemens Franz for his endless efforts in refining this game's overall look, while making it more functional. Golem is inspired by a Jewish legend and, despite referring to some Jewish elements, it isn't meant to represent this tradition we all respect deeply. Special thanks go to David Piazza from the Rabbinate Centrale di Milano, expert in Jewish history and culture, who supervised all the decisions regarding icons, names, and setting and gave his blessing to this project.
